LSA

June 2024

# EXECUTIVE SUMMARY

LSA has prepared this Biological Resources Evaluation to examine the potential for special-status biological resources to be impacted by the proposed development of the Peach and Behymer Residential Project (Project) in Clovis, Fresno County, California.

The proposed 37-acre Project would be fully developed with 266 single-family residences.

The results of a database and literature review and reconnaissance site visit determined that the following special-status species could have potential to be impacted by the proposed Project:

- Swainson's hawk (*Buteo swainsoni*): State Threatened
- Nesting birds

Suitable nest trees are not present on the Project site but are present within the region. Ruderal habitat on the Project site may provide limited foraging opportunities. Impacts to Swainson's hawk would be limited to possible abandonment of nests if established near the Project site and loss of suitable foraging habitat.

All habitats on and adjacent to the Project site have potential to support nesting bird species protected under the Migratory Bird Treaty Act and the California Fish and Game Code.

The Project is not anticipated to impact special-status plant species. No sensitive natural communities, jurisdictional aquatic resources, wildlife movement corridors, or nursery sites occur on the Project site. The Project site does not intersect any mapped U.S. Fish and Wildlife Service (USFWS) designated critical habitat or habitat conservation plans and does not conflict with local policies or ordinances.

Avoidance and minimization measures, including nest surveys and monitoring, are prescribed which, when implemented, would reduce Project impacts to biological resources to a less than significant level.

# 1.0 INTRODUCTION

## 1.1 PROJECT LOCATION

The proposed Peach and Behymer Residential Project (Project) site on Assessor's Parcel Numbers (APNs) 556-010-28 and 556-01-029 southeast of the intersection of East Behymer Avenue and North Minnewawa Avenue, in the City of Clovis. The 37-acre Project area is depicted on the United States Geological Survey (USGS) *Friant, California* 7.5-minute topographic quadrangle in (Figure 1).

## 1.2 PROJECT DESCRIPTION

The proposed Project would develop 266 single-family residences.

## 1.3 PURPOSE, GOALS, AND OBJECTIVES

The purpose of this Biological Resources Evaluation (BRE) is to identify where potential special-status biological resources may occur within the Project site, determine how those resources may be impacted by the proposed Project, and recommend avoidance, minimization, and mitigation measures to reduce the potential for impact to a less than significant level. This BRE has been prepared to support an analysis of biological conditions as required by the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA), and to support regulatory permit applications, if needed.

# 2.0 METHODS

## 2.1 DEFINITION OF BIOLOGICAL STUDY AREA

For the purposes of this report, the Biological Study Area (BSA) is the Project site plus a 500-foot buffer (Figure 2).

## 2.2 DEFINITION OF SPECIAL-STATUS RESOURCES

For the purposes of this report, special-status resources include:

- Species listed as threatened or endangered under the Federal Endangered Species Act (FESA); species that are under review may be included if there is a reasonable expectation of listing within the life of the Project;
- Species listed as candidate, threatened, or endangered under the California Endangered Species Act (CESA);
- Species designated as Fully Protected or Species of Special Concern by the California Department of Fish and Wildlife (CDFW);
- Plant species with a California Rare Plant Rank (CRPR) in Categories 1 or 2;
- Species designated as locally important by the Local Agency and/or otherwise protected through ordinance or local policy;
- Sensitive natural communities as defined by the CDFW or by Local agencies; and
- Aquatic features.

## 2.3 DATABASE SEARCH AND BACKGROUND REVIEW

The following sources were reviewed for information on special-status biological resources in the Project vicinity:

- CDFW's California Natural Diversity Database (CNDDB; CDFW 2024a)
- CDFW's Biogeographic Information and Observation System (BIOS; CDFW 2024b)
- CDFW's California Wildlife Habitat Relationships (CWHR) System (Mayer and Laudenslayer 1988)
- California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants of California (CNPS 2024)
- United States Fish and Wildlife Service's (USFWS) Information for Planning and Consultation (IPaC) system (USFWS 2024b)
- USFWS Critical Habitat Mapper (USFWS 2024a)
- USFWS National Wetlands Inventory (NWI; USFWS 2024c)
- USGS National Hydrography Dataset (NHD; USGS 2024)
- United States Department of Agriculture, Natural Resources Conservation Service (NRCS) Web Soil Survey (NRCS 2024a)
- Current and historical aerial imagery (Google LLC 2024; NETR 2024)

For each of these data sources, the search was focused on the *Friant, California* USGS 7.5-minute quadrangle in which the Project is located, plus the surrounding eight quadrangles. For the CNDDB, a 10-mile search radius was used.

The CNDDB provides element-specific spatial information on individually documented occurrences of special-status species and sensitive natural communities. Some of the information available in the CNDDB is still undergoing review by the CDFW; these records are identified as unprocessed data. The CNPS database provides similar information as the CNDDB, but at a much lower spatial resolution. Much of this information in these databases is obtained opportunistically and is often focused on protected lands or on lands where development has been proposed. Neither database represents a comprehensive survey for special-status resources in the region. As such, the absence of recorded occurrences in these databases at any specific location does not preclude the possibility that a special-status resource could be present. The NWI and Web Soil Survey provide comprehensive data but at a low resolution, requiring confirmation in the field.

The results of the database inquiries were reviewed to develop a list of special-status resources that may be present on and within the vicinity of the Project. This list was then evaluated against the existing conditions observed during the reconnaissance site visit of the BSA to determine which

special-status resources have the potential to occur, and then the potential for impacts to those resources through implementation of the Project.

## 2.4 RECONNAISSANCE-LEVEL FIELD SURVEYS

The environmental setting of the BSA was documented during a reconnaissance site survey on May 1, 2024 (see Table A).

### Table A: Field Surveys Personnel and Timing

| Date | Personnel | Timing | Weather Conditions | Survey Type |
|---|---|---|---|---|
| 5/1/2024 | Carie Wingert | 1030–1156 | Sunny and clear, light breeze, 64°F–67°F | Reconnaissance |

Source = LSA (May 2024).
°F = degrees Fahrenheit

The reconnaissance-level site survey of the BSA characterized the existing biological conditions of the Project site and the greater BSA. The site survey consisted of a combination of windshield surveys and pedestrian transects. Adjacent parcels were visually scanned from the Project site and public roads for potential special-status resources. The survey effort resulted in 100 percent visual coverage of the BSA.

All plant and animal species detected were recorded and identified to the lowest taxonomic level necessary to determine rarity. The locations of any special-status species detected were documented using GPS. All other potential sensitive biological resources, such as aquatic habitats, were also recorded.

## 2.5 POTENTIAL FOR OCCURRENCE ASSESSMENT

Assessments for the potential occurrence of special-status species are based on known ranges, habitat preferences for the species, species occurrence records from the CNDDB and CNPS, species occurrence records from other sites in the vicinity of the survey area, previous reports for the Project site, and the results of surveys of the Project site. The potential for each special-status species to occur in the BSA was evaluated according to the following criteria:

- **No:** Habitat on and adjacent to the site is clearly unsuitable to meet the needs of the species (i.e., foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime), and species would have been identifiable on site if present (e.g., oak trees). Protocol surveys (if conducted) did not detect species.

- **Yes:** Conditions within the BSA may, in some way, support a portion of the species' ecology (e.g., foraging, reproduction, movement/migration). Protocol surveys (if conducted) were conducted, but negative results do not exclude the potential for a species to occur.

- **Present:** The species was observed within the BSA or has been recorded (e.g., CNDDB, other reports) in the BSA recently (within the last 5 years).

# 3.0 REGULATORY SETTING

Regulated or sensitive resources that were studied and analyzed include special-status plant and animal species, nesting birds and raptors, sensitive plant communities, jurisdictional waters and wetlands, wildlife movement areas, and locally protected resources, such as protected trees. Regulatory authority over biological resources is shared by federal, State, and local authorities. Primary authority for regulation of general biological resources lies within the land use control and planning authority of local jurisdictions (in this instance, the City of Clovis).

Potential impacts to biological resources were analyzed based on the following list of statutes. Summaries of these statues are provided in Appendix A.

- CEQA
- FESA
- CESA
- Federal Clean Water Act
- California Fish and Game Code
- Migratory Bird Treaty Act (MBTA)
- The Bald and Golden Eagle Protection Act
- Porter-Cologne Water Quality Control Act
- City of Clovis General Plan

# 4.0 ENVIRONMENTAL SETTING

## 4.1 PHYSICAL CHARACTERISTICS

### 4.1.1 Climate

The Project is in an area with a Mediterranean climate of hot summers and mild, wet winters. Average high temperatures range from 55 degrees Fahrenheit (°F) in January to 98°F in July, with daily temperatures exceeding 100°F several days in the summer (WRCC 2024). Average low temperatures range from 37°F in December to 66°F in July. Precipitation occurs primarily as rain, most of which falls from November to April, with an average of 11 inches of rainfall per year. Precipitation may also occur as a dense fog during the winter known as tule fog. Rain rarely falls during the summer months.

### 4.1.2 Topography and Land Use

The Project site is flat with portions in agricultural use as orchards. Elevation on the Project site is approximately 383 feet above mean sea level. Two rural residences are located on the property. Review of historic aerial imagery indicates the site has been used for orchards for decades (Google LLC 2024).

The Project vicinity is dominated by agricultural uses and rural residences. Adjacent land uses include East Behymer Avenue, orchards, and rural residences to the north; North Minnewawa Avenue and orchards to the east; orchards to the south; and North Peach Avenue, agriculture and rural residentials to the west. Urban residential and commercial development is approximately 0.5 mile further to the west.

### 4.1.3 Soils

The BSA is underlain by two soil types (Figure 3; NRCS 2024a).

**Ramona sandy loam:** This soil type underlies most of the Project site and consists of fine-loamy, mixed, and thermic soils found on nearly level to moderately steep terraces and fans. It is formed in alluvium derived primarily from granitic and similar rock sources. It is well-drained with moderately slow permeability and is commonly used for both irrigated and non-irrigated cultivation. This is not a hydric soil (NRCS 2024b).

**San Joaquin sandy loam, 0 to 3 percent slopes, Major Land Resource Area (MLRA) 17:** This soil type consists of moderately deep to hard pan, well and moderately well-drained soils formed in alluvium from mostly granitic sources. It is typically found on shallow slopes from near level to undulating terraces up to about 500 feet above sea level. It is typically used for cultivation and livestock grazing. This soil may be hydric in fan remnants and open depressions (NRCS 2024b).

I:\20241700 De Young Peach Behymer\GIS\Pro\Peach and Behymer Residential Project\Peach and Behymer Residential Project.aprx (5/16/2024)

### 4.1.4 Hydrology

No aquatic features were observed on site. The NWI and National Hydrography Dataset depict a riverine feature on the northwest boundary of the site that no longer exists (Figure 4; USGS 2024, USFWS 2024c). Review of historic aerial and topo maps suggest an irrigation ditch was present until sometime before 1972 when the ditch may have been replaced with underground piping (NETR 2024).

## 4.2 VEGETATION AND OTHER LAND COVER

Five habitat types were observed within the BSA: Ruderal, Orchard, Row Crop, Annual Grassland, and Developed (Figure 5). The acreages of each habitat within the BSA and Project site are provided in Table B. The habitats observed on site have been described in the context of the CWHR (Mayer and Laudenslayer 1988).

**Table B: Habitat Acreages Within the BSA and Project Site**

| Habitat Type | Acreages | |
|---|---|---|
| | BSA | Project Site |
| Ruderal | 24.86 | 24.13 |
| Orchard | 64.60 | 12.24 |
| Row Crop | 13.60 | 0.00 |
| Annual Grassland | 12.23 | 0.03 |
| Developed | 14.15 | 1.02 |

Source: LSA Site Visit, May 1, 2024.
BSA = Biological Study Area

### 4.2.1 Ruderal

The CWHR describes a habitat as barren if less than 2 percent is covered with vegetation (Mayer and Laudenslayer 1988). This includes habitats in which there are large stretches of bare ground between plant specimens, typically ruderal species, as well as graded and paved areas. Ruderal areas are present on the western and eastern portions of the Project site (Figure 5).

### 4.2.2 Orchard

Orchard is classified by the CWHR as an open, single species tree-dominated habitat. Typically, the tree species are low, bushy trees with an open understory. Orchards can include almonds, apples, apricots, cherries, figs, nectarines, peaches, pears, pecan, pistachios, plums, pomegranates, prunes, or walnuts. The understory may consist of low-growing grasses, legumes, and other herbaceous plant species or may be barren. Typically, this habitat is intensively maintained and has a constant available water source for irrigation. Orchards are present in the central portion of the Project site and throughout the BSA (Figure 5).

Vegetation Communities

I:\20241700 De Young Peach Behymer\GIS\Pro\Peach and Behymer Residential Project\Peach and Behymer Residential Project.aprx (5/16/2024)

### 4.2.3 Row Crop

The CWHR identifies several types of row crop including Irrigated Row and Field Crops, Irrigated Grain Crops, and Irrigated Hayfield. Row crop habitats are monotypic habitats consisting of a single agricultural crop species grown over several acres and are usually irrigated. Row crop habitats are typically intensively maintained and are often subject to turnover multiple times per year. Row crop was observed within the BSA immediately north of the Project site (Figure 5).

### 4.2.4 Annual Grassland

The CWHR defines annual grassland as open grasslands dominated by annual grasses and forbs and with few or no trees (Mayer and Laudenslayer 1988). It is mostly commonly found on flat plains to gentle rolling foothills and often underlain by drier soils.

Annual grassland is not present on the Project site but is present on a private parcel adjacent to the southwest corner of the Project site. This habitat was not closely examined due to lack of access. Ripgut (*Bromus diandrus*) was observed from the perimeter as a dominant on this parcel (Figure 5).

### 4.2.5 Developed

Developed areas within the BSA correspond with the CWHR description for Urban, which is divided into five different categories: tree grove, street strip, shade tree/lawn, lawn, and shrub cover, each usually dominated by nonnative ornamental species. Developed habitat is present on the Project site at one rural residential location and includes rural residences elsewhere within the BSA (Figure 5).

## 4.3 GENERAL WILDLIFE OBSERVATIONS

Wildlife species detected included common raven (*Corvus corax*), northern mockingbird (*Mimus polyglottos*), red-tailed hawk (*Buteo jamaicensis*), California ground squirrel (*Otospermophilus beecheyi*), pocket gopher (*Thomomys bottae*) throws, and large domestic dog (*Canis familiaris*) tracks.

# 5.0 SPECIAL-STATUS RESOURCES

Local, State, and federal agencies regulate special-status species and other sensitive biological resources and require an assessment of their presence or potential for presence to be on site prior to the approval of proposed development on a property.

## 5.1 SPECIAL-STATUS SPECIES

Table C presents the list of special-status plant and animal species determined to have potential to occur on site and identifies whether the Project may affect the species and threaten the viability of the species population. The complete list of species evaluated for this Project is included in Appendix D. Each species is further discussed in the subsections below.

### Table C: Special-Status Species with Potential to Occur on Site

| Scientific Name<br>Common Name | Status<br>FESA/CESA | Potentially Affected by Project?<br>Yes/No | Viability Threat?<br>Yes/No |
|---|---|---|---|
| **Birds** | | | |
| *Buteo swainsoni*<br>Swainson's hawk | --/ST | Yes | No |

Source: Compiled by LSA (2024)
CESA = California Endangered Species Act
FESA = Federal Endangered Species Act
ST = State Threatened

### 5.1.1 Special-Status Plant Species

The literature review identified 20 special-status plant species known or with potential to occur in the vicinity of the Project (see evaluation table in Appendix D). None were found to have a potential to occur on site due to the lack of suitable habitat conditions.

### 5.1.2 Special-Status Animal Species

The literature review identified 31 special-status animal species known or with potential to occur in the vicinity of the Project (see evaluation table in Appendix A). Of those, one (1) was determined to have the potential to occur and be impacted by the Project:

- Swainson's hawk (*Buteo swainsoni*) – State Threatened

#### 5.1.2.1 Swainson's Hawk

***Buteo swainsoni* (Status: State Threatened).** Swainson's hawks occur in grassland, desert, and agricultural landscapes throughout the Central Valley and Antelope Valley (Bechard et al. 2020, Zeiner et al. 1990). Some hawks may be resident, especially in the southern portion of their range, while others may migrate between winter and breeding habitats. They prefer larger isolated trees or small woodlots for nesting, usually with grassland or dry-land grain fields nearby for foraging and have been known to nest in large eucalyptus trees along heavily traveled freeway corridors.

Swainson's hawks forage in grassland, open scrub, pasture, and dryland grain agricultural habitats, primarily for rodents. Swainson's hawks exhibit a moderate to high nest site fidelity for successful nest sites.

The nearest occurrence was recorded 2018 as a possible nest site located approximately 4 miles to the west (CDFW 2024a). A second occurrence recorded in nearly the same location in 2017 was of a pair of Swainson's hawks exhibiting courting behaviors.

There are not suitable nest trees on the Project site; however, there are several large trees within 0.5 mile of the Project site that could support nesting Swainson's hawks. There is evidence of a prey base on the Project site (pocket gophers) though the ruderal areas on site likely provide limited foraging opportunities.

### 5.1.3 Other Protected Species

The Project site has the potential to support nesting birds.

## 5.2 SENSITIVE NATURAL COMMUNITIES

### 5.2.1 Sensitive Plant Communities

The database search identified five sensitive plant communities within the search radius: Great Valley Mixed Riparian Forest, Northern Basalt Flow Vernal Pool, Northern Claypan Vernal Pool, Northern Hardpan Vernal Pool, and Sycamore Alluvial Woodland. No sensitive plant communities are present on site.

### 5.2.2 Critical Habitats

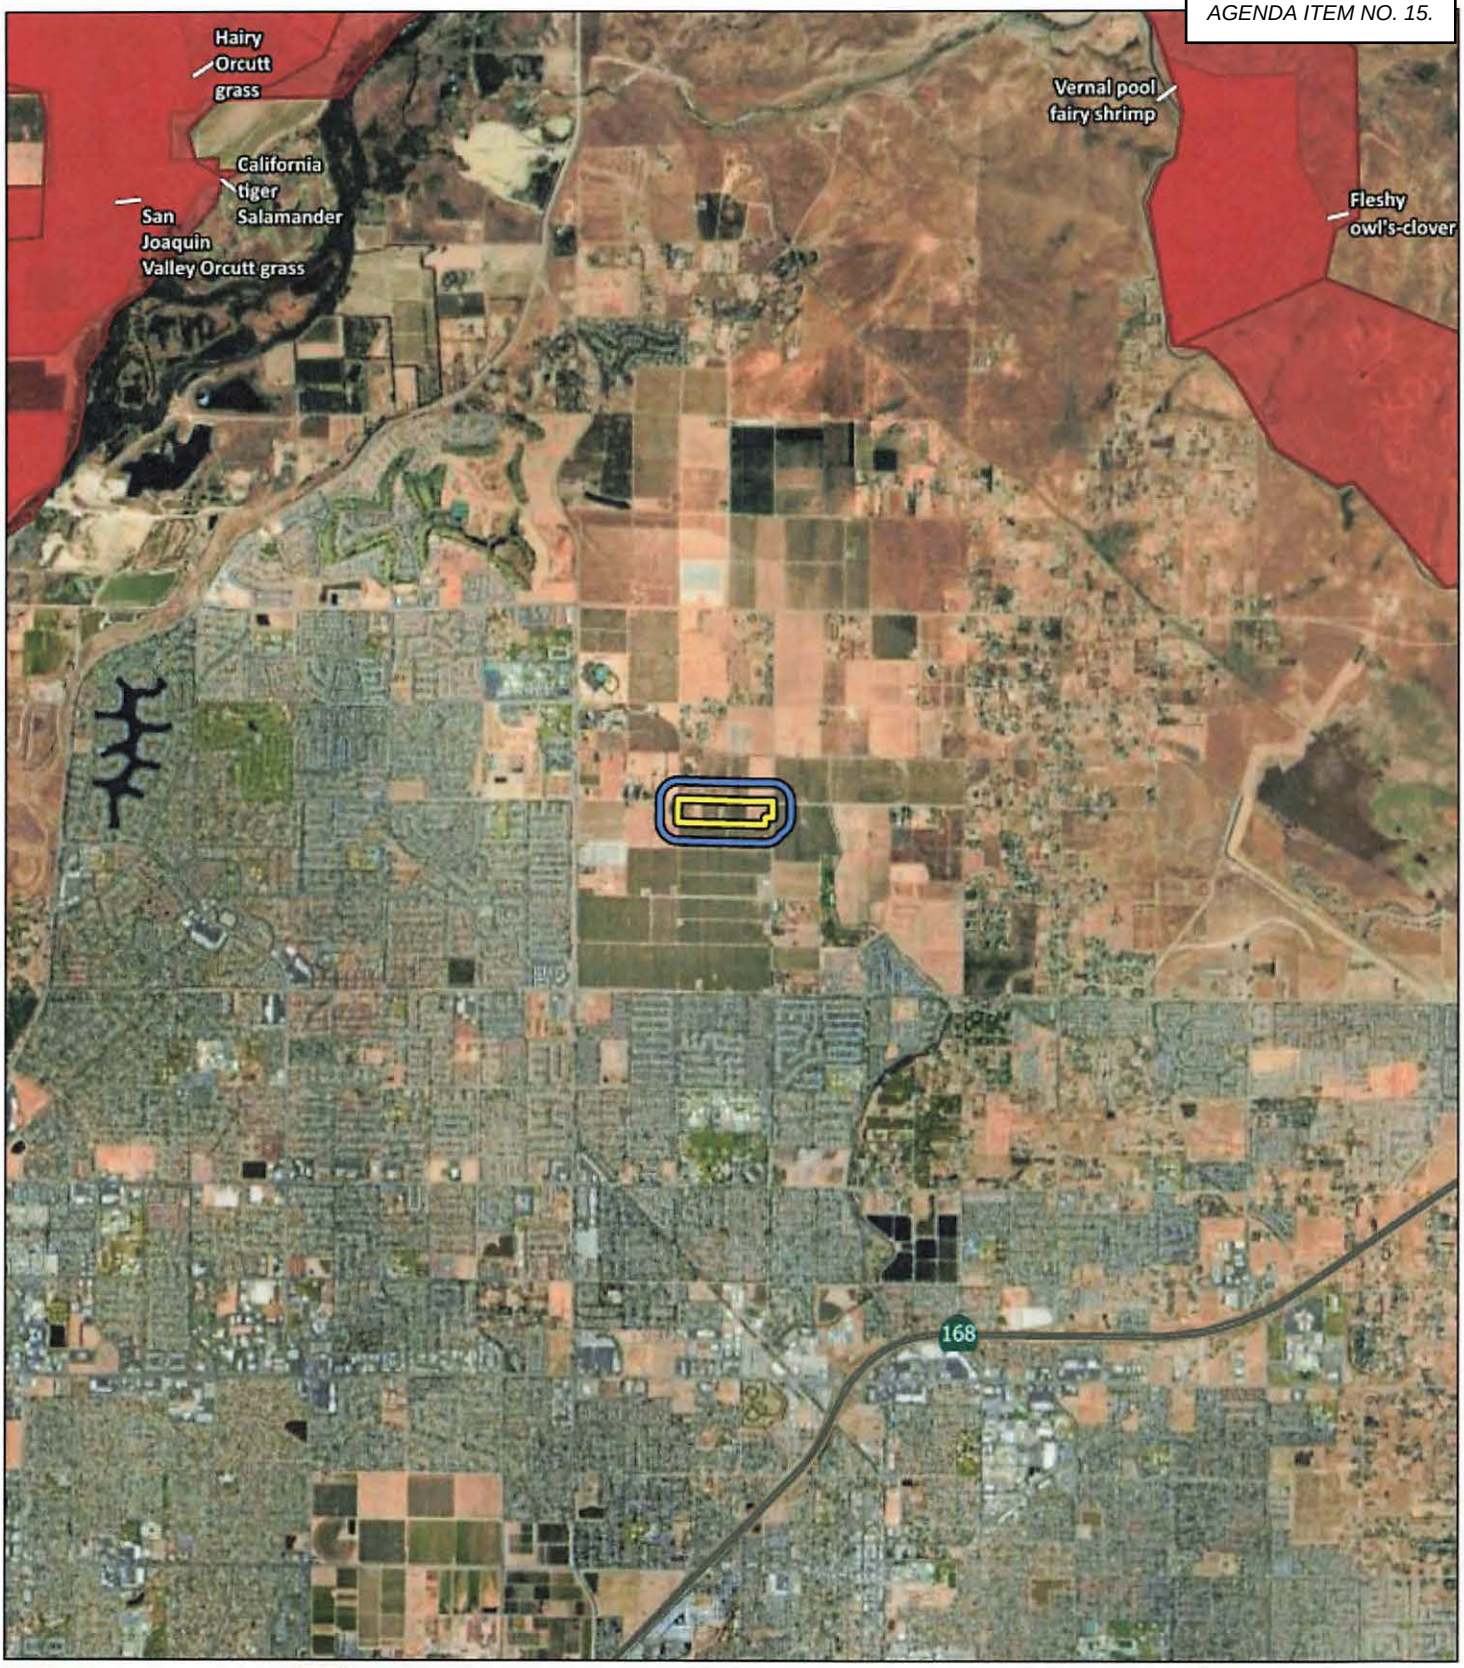
There are no federally designated critical habitats mapped over the BSA (Figure 6; USFWS 2024a).

## 5.3 JURISDICTIONAL AQUATIC RESOURCES

No potentially jurisdictional features are present on site.

## 5.4 WILDLIFE MOVEMENT

Wildlife movement corridors, also referred to as dispersal corridors or landscape linkages, are generally defined as linear features along which animals can travel from one habitat or resource area to another. Wildlife movement corridors can be large tracts of land that connect regionally important habitats that support wildlife in general, such as stop-over habitat that supports migrating birds or large, contiguous natural habitats that support animals with very large home ranges (e.g., coyotes [*Canis latrans*], mule deer [*Odocoileus hemionus californicus*]). They can also be small-scale movement corridors, such as riparian zones, that provide connectivity and cover to support movement at a local scale.



LSA

FIGURE 6

SOURCE: Google Imagery (2024); USFWS (2024)

*Peach and Behymer Residential Project*

Critical

I:\20241700 De Young Peach Behymer\GIS\Pro\Peach and Behymer Residential Project\Peach and Behymer Residential Project.aprx (5/16/2024)

The BSA is not located within an identified wildlife movement corridor (CDFW 2024b). There are no features on site that would lend themselves specifically to wildlife movement (e.g., riparian corridors). The site is surrounded by a mix of rural residential and agricultural uses.

## 5.5 RESOURCES PROTECTED BY LOCAL POLICIES AND ORDINANCES

The City's General Plan includes policies for the protection of biological resources including:

- **Policy 2.6: Biological resources**. Support the protection of biological resources through the conservation of high quality habitat area.
- **Policy 2.7: Native plants**. Encourage the use of native and climate-appropriate plant species and prohibit the use of plant species known to be invasive.
- **Policy 2.8: Urban forest.** Maintain and enhance a diverse and healthy urban forest on public and private lands.

The City's Municipal Code includes specific provisions for the protection of trees, including those on private property (Chapter 9.30).

The Project site does not contain high quality habitat, and no sensitive plant species were detected during the site visit.

The ornamental trees located at the two residences on the Project site may be subject to the City's tree protection ordinance. The almond orchard trees on site are exempt from this ordinance (9.30.050 Exemptions).

## 5.6 HABITAT CONSERVATION PLANS

The BSA does not fall within the boundaries of a Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other locally adopted habitat conservation plan (CDFW 2024b).

# 6.0 IMPACT EVALUATION AND RECOMMENDED AVOIDANCE, MINIMIZATION AND MITIGATION MEASURES

This section describes the potential biological resources impacts associated with development of the project based on the thresholds of significance listed in the *State CEQA Guidelines* Appendix G, Environmental Checklist, which are listed throughout, along with consideration for other federal and State laws.

## 6.1 SPECIAL-STATUS SPECIES

The proposed Project would have a significant effect on biological resources if it would:

***a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.***

### 6.1.1 Project Impacts to Special-Status Plant Species

No special-status plant species have the potential to occur on site due to the highly disturbed nature of the Project site and the lack of suitable habitat conditions. The Project would have no impact on special-status plant species.

### 6.1.2 Project Impacts to Special-Status Animal Species

One special-status species was determined to have a potential to occur on site: Swainson's hawk.

#### 6.1.2.1 Swainson's Hawk

Several trees in the BSA and greater Project vicinity are suitable for nesting. The Project site provides limited foraging habitat. Swainson's hawks have been observed within 5 miles of the Project site as recently as 2018 (CDFW 2024a, 2024b).

Impacts to Swainson's hawk could occur if construction of the Project occurs during the nesting season and an active Swainson's hawk nest is disturbed by noise, vibration, or the presence of construction activity. The Project could also impact Swainson's hawk through the loss of suitable foraging habitat. Foraging habitat in the Project vicinity is limited, with more suitable grassland and grain field habitat to the north and west of the Project site. Development of the Project could contribute to the cumulative loss of foraging habitat as development continues in the region. Despite the potential for Swainson's hawk to occur on or near the Project site, these impacts would not jeopardize the continued existence of the species as they exhibit a moderate to high tolerance for disturbance around nests, and other areas of foraging habitat remain in the greater region.

#### 6.1.2.2 Nesting Birds

The BSA contains suitable habitat that could support a variety of ground and tree nesting bird species protected under the MBTA and the California Fish and Game Code. Impacts to active nests

could occur from direct disturbance of active nests during construction of the Project and from noise and vibration caused by construction activities. Based on the disturbed nature of the site and surrounding lands, construction of the Project is not expected to cause a significant reduction in nesting habitat in the region.

#### 6.1.2.3 Avoidance, Minimization, and Mitigation Measures

The following mitigation measures (MMs) are recommended to avoid, minimize, and/or mitigate impacts to special-status animal species.

**BIO-MM-1** **Pre-Activity Surveys for Swainson's Hawk Nests.** If Project activities must occur during the nesting season (February 15 to August 31), pre-activity surveys shall be conducted for Swainson's hawk nests within 14 days prior to the start of construction. The surveys would be conducted within the Project site plus a 0.5-mile buffer. The survey shall be conducted in accordance with the methodology outlined in existing protocols. Note that Swainson's hawks may establish a nest at any time from February through June; multiple Swainson's hawks nest surveys may be necessary in one season at the direction of a qualified biologist, depending on the timing of Project construction.

If no Swainson's hawk nests are found, no further action is required.

**BIO-MM-2** **Swainson's Hawk Nest Avoidance.** If an active Swainson's hawk nest is discovered at any time within 0.5 mile of active construction, a qualified biologist shall complete an assessment of the potential for current construction activities to impact the nest. The assessment shall consider the type of construction activities, the location of construction relative to the nest, the visibility of construction activities from the nest location, and other existing disturbances in the area that are not related to construction activities of this Project. Based on this assessment, the biologist shall determine if construction activities can proceed and if nest monitoring will be required. At a minimum, construction activities shall not occur within 100 feet of an active nest and shall require monitoring if within 500 feet of an active nest. These buffers may need to increase depending on the sensitivity of the nest location.

**BIO-MM-3** **Pre-Activity Nesting Bird Surveys**. If Project activities must occur during the nesting season (February 15 to August 31), pre-activity nesting bird surveys shall be conducted no more than 7 days prior to the start of construction at the construction site plus a 250-foot buffer for songbirds and a 500-foot buffer for raptors (other than Swainson's hawk). If no active nests are found, no further action is required; however, note that nests may become active at any time throughout the summer, including when construction activities are occurring. If active nests are found during the survey or at any time during Project construction, an avoidance buffer ranging from 50 feet to 350 feet shall be required, as determined by a qualified biologist. The avoidance buffer shall remain in place until the biologist has determined that the young are no longer reliant on the nest. Work may occur within the avoidance

buffer under the approval and guidance of the biologist. The biologist shall have the ability to stop construction if nesting adults show sign of distress.

**Significance After Mitigation.** Implementation of the mitigation measures above will reduce Project impacts to special-status species to a less than significant level.

## 6.2 SENSITIVE NATURAL COMMUNITIES AND CRITICAL HABITAT

The proposed Project would have a significant effect on biological resources if it would:

***b) Have a substantial adverse impact on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service.***

The BSA does not overlap critical habitat, and there are no sensitive natural communities present. Therefore, the Project would have no impacts to sensitive natural communities and no measures are required.

## 6.3 JURISDICTIONAL AQUATIC RESOURCES

The proposed Project would have a significant effect on biological resources if it would:

***c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.***

No jurisdictional aquatic resources are present on the Project site. No impacts to jurisdictional aquatic resources would occur with construction of the Project and no measures are required.

## 6.4 WILDLIFE MOVEMENT

The proposed Project would have a significant effect on biological resources if it would:

***d) Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.***

The Project site does not intersect any regional or local wildlife movement corridors, nor does it support an important wildlife nursery site. No impacts to wildlife movement or nursery sites would occur and no measures are required.

## 6.5 LOCAL POLICIES AND ORDINANCES

The proposed Project would have a significant effect on biological resources if it would:

***e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.***

The Project will not conflict with general plan policies designed to protect biological resources as the Project site does not contain high quality habitat. Ornamental trees located at the residences may be subject to the City's tree protection ordinance. Complying with the City's tree removal requirements will satisfy this ordinance and no conflict would occur. Orchard trees are not subject to this ordinance and may be removed without a permit.

## 6.6 ADOPTED OR APPROVED PLANS

The proposed Project would have a significant effect on biological resources if it would:

***f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan.***

The Project is not located within the boundaries of an adopted HCP, NCCP, or other habitat conservation plan. Development of the Project would not conflict with any habitat conservation plan, and no measures are required.

# 7.0 LIMITATIONS, ASSUMPTIONS, AND USE RELIANCE

This BRE has been performed in accordance with professionally accepted biological investigation practices conducted at this time and in this geographic area. The findings and opinions conveyed in this report are based on findings derived from site reconnaissance, and specified historical and literature sources. The biological investigation is limited by the scope of work performed. Reconnaissance biological surveys for certain taxa may have been conducted as part of this assessment but were not performed during a particular blooming period, nesting period, or particular portion of the season when positive identification would be expected if present and, therefore, cannot be considered definitive. The biological surveys are limited also by the environmental conditions present at the time of the surveys. In addition, general biological (or protocol) surveys do not guarantee that the organisms are not present and would not be discovered in the future within the site. For example, mobile animal species could occupy the site on a transient basis or re-establish populations in the future. No other guarantees or warranties, expressed or implied, are provided.

# REGULATORY SETTING

# A.1 REGULATORY SETTING

## A.1.1 Federal Laws and Regulations

### A.1.1.1 Federal Endangered Species Act of 1973 (USC Title 16, Sections 1531–1543)

The federal Endangered Species Act (FESA) and subsequent amendments provide guidance for the conservation of endangered and threatened species and the ecosystems upon which they depend. FESA defines species as threatened or endangered and provides regulatory protection for listed species. FESA provides a program for the conservation and recovery of threatened and endangered species, as well as the protection of designated critical habitat that the United States Fish and Wildlife Service (USFWS) determines is required for the survival and recovery of listed species. The USFWS and National Marine Fisheries Service (NMFS) share responsibilities for administering FESA.

Section 9 of FESA prohibits the "take" of species listed by the USFWS as threatened or endangered. Although take of a listed species is prohibited, it is allowed when it is incidental to an otherwise legal activity. As defined by FESA, taking means "...to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect or attempt to engage in such conduct." The definition of "harm" includes significant habitat modification or degradation that results in death or injury to listed species by significantly impairing behavioral patterns related to breeding, feeding, or shelter. "Harass" is defined as actions that create the likelihood of injury to listed species by disrupting normal behavioral patterns related to breeding, feeding, and shelter significantly.

Section 7 of FESA requires federal agencies, in consultation with and with assistance from the Secretary of the Interior or the Secretary of Commerce, as appropriate, to ensure that actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of threatened or endangered species or result in the destruction of adverse modification of critical habitat for these species. Regulations governing interagency cooperation under Section 7 are found in California Code of Regulations (CCR) Title 50, Part 402. If an activity could result in "take" of a listed species as an incident of an otherwise lawful activity, then a biological opinion can be issued with an incidental take statement that exempts the activity from FESA's take prohibitions.

Section 10 provides a means whereby a nonfederal action with the potential to result in take of a listed species can be allowed under an incidental take permit. Application procedures are found at Code of Federal Regulations (CFR) Title 50, Sections 13 and 17, for species under the jurisdiction of USFWS and CFR, Title 50, Sections 217, 220, and 222, for species under the jurisdiction of NMFS. Section 10 would apply to the Project if take of a species (as defined in Section 9) were determined to occur.

Sections 4(a)(3) and (b)(2) of FESA require the designation of critical habitat to the maximum extent possible and prudent based on the best available scientific data and after considering the economic impacts of any designations. Critical habitat is defined in Section 3(5)(A) of FESA as: (1) areas within the geographic range of a species that are occupied by individuals of that species and contain the primary constituent elements (physical and biological features) essential to the conservation of the species, thus warranting special management consideration or protection; and (2) areas outside of the geographic range of a species at the time of listing but that are considered essential to the conservation of the species.

### A.1.1.2 Migratory Bird Treaty Act (USC Title 16, Sections 703–711)

The Migratory Bird Treaty Act (MBTA), first enacted in 1918, is the result of a series of treaties that the United States has with Great Britain (on behalf of Canada), Mexico, Japan, and the former Soviet Union that provide for international migratory bird protection. The MBTA authorizes the Secretary of the Interior to regulate the taking of migratory birds. The act provides that it shall be unlawful, except as permitted by regulations, "to pursue, take, or kill any migratory bird, or any part, nest or egg of any such bird" (United States Code [USC] Title 16, Section 703). The MBTA currently includes several hundred species and includes all birds native to the United States.

### A.1.1.3 Bald and Golden Eagle Protection Act of 1940 (USC Title 16, Section 668)

The Bald and Golden Eagle Protection Act (BGEPA) of 1940 protects bald eagles (*Haliaeetus leucoephalus*) and golden eagles (*Aquila chrysaetos*) by prohibiting the taking, possession, and commerce of these species and established civil penalties for violation of this act. Take of bald and golden eagles includes to "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." To disturb means to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available: (1) injury to an eagle; (2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior; or (3) nest abandonment, by substantially inferring with normal breeding, feeding, or sheltering behavior (*Federal Register*, volume 72, page 31132; 50 CFR 22.3).

The BGEPA was amended in 2022 to allow USFWS to issue permission for take of bald and golden eagles under specific circumstances as outlined in 50 CFR 22 Subpart C. Take permits may be issued where "the take is compatible with the preservation of the bald eagle and the golden eagle; is necessary to protect an interest in a particular locality; is associated with, but not the purpose of, the activity; and cannot practicably be avoided" (50 CFR 22.80).

### A.1.1.4 Federal Clean Water Act (USC, Title 33, Sections 1521–1376)

The federal Clean Water Act (CWA) provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters.

Section 404 establishes a permit program administered by the United States Army Corps of Engineers (USACE) that regulates the discharge of the dredged or fill material into waters of the United States, including wetlands. The USACE implementing regulations are found in CFR Title 33, Sections 320 and 330. Guidelines for implementation are referred to as the Section 404(b)(1) Guidelines, which were developed by the United States Environmental Protection Agency (USEPA) in conjunction with USACE (40 CFR 230). The guidelines allow the discharge of dredged or fill material into the aquatic system only if there is no practicable alternative that would have less adverse impacts.

Section 401 requires that a Project applicant that is pursuing a federal license or permit allowing a discharge to waters of the United States obtain State Certification of Water Quality, thereby ensuring that the discharge will comply with provisions of the CWA. The State Water Resources Control Board (SWRCB) administers the certification program in California, primarily through its

regional boards. Section 402 establishes a permitting system for the discharge of any pollutant (except dredged or fill material) into waters of the United States.

Under Section 10 of the Rivers and Harbors Act, the USACE regulates the construction of any structure in or over any navigable water of the United States. Navigable waters are defined as "those waters of the U.S. that are subject to the ebb and flow of the tide shoreward to the mean high water mark, and/or are presently used, or have been used in the past, or may be susceptible to use to transport interstate or foreign commerce."

### A.1.2 Applicable State Laws and Regulations

#### A.1.2.1 California Environmental Quality Act (California Public Resources Code, Sections 21000–21178, and Title 14 CCR, Section 753, and Chapter 3, Sections 15000–15387)

The California Environmental Quality Act (CEQA) is California's broadest environmental law. CEQA helps guide the issuance of permits and approval of projects. Courts have interpreted CEQA to afford the fullest protection of the environment within the reasonable scope of the statutes. CEQA applies to all discretionary projects proposed to be conducted or approved by a State, county, or city agency, as well as private projects requiring discretionary government approval.

The purpose of CEQA is to disclose to the public the significant environmental effects of a proposed discretionary project; prevent or minimize damage to the environment through development of project alternatives, mitigation measures, and mitigation monitoring; disclose to the public the agency decision-making process to approve discretionary projects; enhance public participation in the environmental review process; and improve interagency coordination.

*State CEQA Guidelines* Section 15380(b) provides that a species not listed on the federal or State list of protected species nonetheless may be considered rare or endangered for purposed of CEQA if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definition in FESA and the section of the California Fish and Game Code dealing with rare or endangered plants or animals.

#### A.1.2.2 California Endangered Species Act (California Fish and Game Code Section 2050 et seq.)

The California Endangered Species Act (CESA) establishes the policy of the State to conserve, protect, restore, and enhance threatened or endangered species and their habitats. CESA mandates that State agencies should not approve projects that would jeopardize the continued existence of threatened or endangered species if reasonable and prudent alternatives are available that would avoid jeopardy. For projects that would result in take of a species listed under CESA, a project proponent would need to obtain a take permit under Section 2081(b). Alternatively, the California Department of Fish and Wildlife (CDFW) has the option of issuing a Consistency Determination (Section 2080.1) for projects that would affect a species listed under both CESA and FESA, as long as compliance with FESA would satisfy the "fully mitigate" standard of CESA and other applicable conditions.

### A.1.2.3 Porter-Cologne Water Quality Control Act

"Waters of the State" are broadly defined by the Porter-Cologne Water Quality Control Act (§ 1305(e)) as "any surface water or groundwater, including saline waters, within the boundaries of the state." Under this definition, isolated wetlands that may not be subject to regulations under federal law are waters of the State.

The California Water Code defines "waters of the State" to include any surface water or groundwater, including saline waters, within the boundaries of the State.

On April 2, 2019, the SWRCB adopted its *State Policy for Water Quality Control: State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (revised April 6, 2021), herein referred to as Procedures, in which it defined wetlands as follows:

> *An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation.*

All artificial wetlands that are less than 1 acre in size and do not satisfy the criteria set forth in 2, 3.a, 3.b, or 3.c are not waters of the State.

All waters of the United States, including that meet the current and any historic definition, are also considered waters of the State (CCR 23 3831 (w)). Therefore, waters of the State include features that have been determined by the USEPA or the USACE to be "waters of the United States" in an approved jurisdictional determination; "waters of the United States" identified in an aquatic resource report verified by the USACE upon which a permitting decision was based; and features that are consistent with any current or historic final judicial interpretation of "waters of the United States" or any current or historic federal regulation defining "waters of the United States" under the federal CWA.

The State's definition of a wetland deviates from the USACE procedures in that a lack of vegetation does not disqualify a feature from identification as a wetland water of the State, otherwise referred to as nonfederal waters of the State.

The State is further required to comply with Executive Order W-59-93 published August 23, 1993, which states that the "Water Boards' regulation of dredge and fill activities must ensure "no net loss" and long-term net gain in the quantity, quality, and permanence of wetlands acreages and values…"

### A.1.2.4 Various Sections of the California State and Fish and Game Code

**Section 460 and Sections 4000-4003.** Chapter 5 of the California Fish and Game Code describes regulations concerning the take of furbearing mammals, including defining methods of take, seasons of take, bag and possession limits, and areas of the State where take is allowed. Sections 4000–4003 define furbearing mammals and the issuance of permits by the Department. Sections 460 and 4000

identify fisher, marten, river otter, desert kit fox, and red fox as furbearing mammals, and Section 460 prohibits take of these species at any time. This section of the California Fish and Game Code has historically been interpreted to apply to restrictions on furbearer trapping permits but has recently been expanded by CDFW to apply to any forms of take and treated as if these species were listed under CESA.

**Sections 1600 through 1616.** CDFW regulates all activities (construction, discharge, dredge, diversion, etc.) within rivers, streams, and lakes, and associated riparian vegetation, under California Fish and Game Code Section 1600 *et seq*. This includes all such features on public and private lands throughout California. The regulatory limits of their jurisdiction are generally considered to include all area within the bed, bank, and channel of a river, stream, or lake, plus the outer extent of riparian vegetation immediately adjacent to these aquatic features. Recently CDFW has asserted jurisdiction as far out as the limits of the 100-year floodplain around rivers, streams, and lakes. This also includes man-made and/or channelized streams located where natural streams historically occurred, or that are connected to natural streams. Isolated wetlands that are not located within the jurisdictional limits described here are not regulated by CDFW.

**Sections 3511, 4700, 5050, and 5515.** The protection of fully protected species is described in Sections 3511, 4700, 5050, and 5515 of the California Fish and Game Code. These statues prohibit the take or possession of fully protected species. CDFW is unable to authorize incidental take of fully protected species, except as allowed for in an approved Natural Communities Conservation Plan (NCCP) or through direct legislative action.

**Sections 1900 through 1913—Native Plant Protection Act.** California's Native Plant Protection Act (NPPA) requires all State agencies to use their authority to carry out programs to conserve endangered and rare native plants. Provision of the NPPA prohibit that taking of listed plants from the wild and require notification of CDFW at least 10 days in advance of any change in land use. This allows CDFW to salvage listed plant species that otherwise would be destroyed. A project proponent is required to conduct botanical inventories and consult with CDFW during project planning to comply with the provisions of this act and sections of CEQA that apply to rare or endangered plants.

## A.1.3 Local and Regional Laws, Regulations, and Policies

### A.1.3.1 City of Clovis General Plan

Table A.1 highlights the specific policies in the City's General Plan Open Space and Conservation Element (City of Clovis 2014) related to biological resources that are applicable to the Project site.

### A.1.3.2 Local Ordinances

Chapter 9.30 of the City's municipal code outlines the requirements for the protection of trees within the city limits, including requirements for permits prior to removal of any tree on private property (9.30.020) and defines protected trees (9.30.040) as including heritage trees, any tree required to be planted or retained as a condition of approval, multi-trunk trees, any tree with a diameter of 12 inches or more when measure four feet above grade, parkway trees, and any tree memorialized under a site plan review.

## Table A.1: Open Space and Conservation Element

| **Goal 2: Natural, agricultural, and historic resources that are preserved and promoted as key features for civic pride and identity** | |
|---|---|
| Policy 2.1 | Stewardship. Promote responsible planning and management of land and resources among property owners. |
| Policy 2.2 | New development. Encourage new development to incorporate on-site natural resources and low impact development techniques. |
| Policy 2.3 | Visual resources. Maintain public views of open spaces, parks, and natural features. Enhance views along roadways and trails. Preserve Clovis' viewshed of the surrounding foothills and orient new development to capitalize on views of the Sierra Nevada. |
| Policy 2.4 | Agricultural lands. Preserve the city's agricultural legacy through the Agricultural land use designation, memorialize agricultural history and culture, and facilitate thoughtful conversion of lands to development. |
| Policy 2.5 | Right to farm. Support, encourage, and protect agricultural operations within Clovis and recognize their right to farm. |
| **Policy 2.6** | **Biological resources. Support the protection of biological resources through the conservation of high quality habitat area.** |
| **Policy 2.7** | **Native plants. Encourage the use of native and climate-appropriate plant species and prohibit the use of plant species known to be invasive.** |
| **Policy 2.8** | **Urban forest. Maintain and enhance a diverse and healthy urban forest on public and private lands.** |
| Policy 2.9 | National and state historic resources. Preserve historical sites and buildings of state or national significance in accordance with the Secretary of Interior Standards for Historic Rehabilitation. |
| Policy 2.10 | Local historic resources. Encourage property owners to maintain the historic integrity of the site by (listed in order of preference): preservation, adaptive reuse, or memorialization. |
| Policy 2.11 | Old Town. Prioritize the preservation of the historic character and resources of Old Town. |
| Policy 2.12 | Public education. Support public education efforts for residents and visitors about the unique historic, natural, and cultural resources in Clovis. |

# APPENDIX D

# SPECIAL-STATUS SPECIES EVALUATION

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| **Plants** | | | | |
| *Calycadenia hooveri*<br><br>Hoover's calycadenia | --/--<br>1B.3 | Annual herb; blooms July to September; cismontane woodland, valley and foothill grassland; usually on rocky substrate; elevation 215 to 985 feet; presumed extant in Central Valley from San Joaquin County south to Madera County. | No | No suitable habitat present. |
| *Calycadenia spicata*<br><br>spicate calycadenia | --/--<br>1B.3 | Annual herb; blooms May to September; cismontane woodland, valley and foothill grassland; variable microhabitat; elevation 130 to 4,595 feet; multiple presumed extant records in Central Valley from Butte County south to Kern County. | No | No suitable habitat present. |
| *Carpenteria californica*<br><br>tree-anemone | --/ST<br>1B.2 | Perennial evergreen shrub; blooms May to July, sometimes as early as April; chaparral, cismontane woodland; usually on granitic soils; elevation 1,115 to 4,395 feet; only known from Madera and Fresno County foothills. | No | No suitable habitat present and project outside known elevational range. |
| *Castilleja campestris* var. *succulenta*<br><br>succulent owl's clover | --/--<br>1B.2 | Annual herb (hemiparasitic); blooms April to May, and sometimes as early as March; vernal pools, often acidic; 165–2,460 feet; Central Valley floor from San Joaquin County south to Fresno County. | No | No suitable habitat present. |
| *Caulanthus californicus*<br><br>California jewelflower | FE/SE<br>1B.1 | Annual herb; blooms Feb to May; chenopod scrub, pinyon and juniper woodland, and valley/foothill grassland; usually on sandy soils; elevation 200–3,280 feet; documented in Fresno, Kern, San Luis Obispo, Kings, Tulare, and Santa Barbara Counties. | No | No suitable habitat present. |
| *Cryptantha hooveri*<br><br>Hoover's cryptantha | --/--<br>1A | Annual herb; blooms April to May; inland dunes, valley and foothill grassland (sandy soils); elevation 30-490 feet; scattered presumed extant occurrences in Sacramento, Contra Costa, Stanislaus, and Madera Counties; may be extirpated in California. | No | No suitable habitat present. |
| *Downingia pusilla*<br><br>dwarf downingia | --/--<br>2B.2 | Annual herb; blooms March to May; vernal pools, valley and foothill grasslands (mesic); elevation 5-1,460 feet; scattered occurrences in the Central Valley from Tehama County south to Fresno County and in the Bay Area. | No | No suitable habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Eryngium spinosepalum*<br>spiny-sepaled button-celery | --/--<br>1B.2 | Annual or perennial herb; blooms April to May; occurs in valley and foothill grassland, particularly in vernal pools, from 260 to 3,200 feet elevation. | No | No suitable habitat present. |
| *Gratiola heterosepala*<br>Boggs Lake hedge-hyssop | --/SE<br>1B.2 | Annual herb; blooms April to August; marshes and swamps (incl. lake margins), vernal pools; clay soils; elevation 35 to 7,790 feet; scattered occurrences in northern California from Modoc County south to Fresno County. | No | No suitable habitat present. |
| *Imperata brevifolia*<br>California satintail | --/--<br>2B.1 | Perennial rhizomatous herb; blooms September to May; chaparral, coastal scrub, Mojavean desert scrub, riparian scrub, meadows, and seeps; usually mesic conditions; elevation 0 to 3,985 feet; documented throughout California in the Central Valley, the Mojave desert, and southern California. | No | No suitable habitat present. |
| *Lagophylla dichotoma*<br>forked hare-leaf | --/--<br>1B.1 | Annual herb; blooms April to May; cismontane woodland and valley and foothill grassland; sometimes on clay soils; elevation 150 to 1,100 feet; known only from Central Valley from Calaveras County to Fresno County. | No | No suitable habitat present. |
| *Leptosiphon serrulatus*<br>Madera leptosiphon | --/--<br>1B.2 | Annual herb; blooms April to May; cismontane woodland; lower montane conifer forest; elevation 985 to 4,265 feet; documented in the Central Valley from Mariposa County south to Kern County. | No | No suitable habitat present. |
| *Lupinus citrinus* var. *citrinus*<br>orange lupine | --/--<br>1B.2 | Annual herb; blooms April to July; chaparral, cismontane woodland, lower montane conifer forest; granitic substrate; elevation 1,245 to 5,580 feet; only known from Madera and Fresno County foothills. | No | No suitable habitat present and project outside known elevational range. |
| *Navarretia myersii* ssp. *myersii*<br>pincushion navarretia | --/--<br>1B.1 | Annual herb; blooms April and May; vernal pools; often acidic soils; elevation 65 to 1,085 feet; known from Central Valley from Placer County south to Fresno County. | No | No suitable habitat present. |
| *Orcuttia inaequalis*<br>San Joaquin Valley Orcutt grass | FT/SE<br>1B.1 | Annual herb; blooms April–September; vernal pools; 35 to 2,475 feet; Central Valley from Solano County south to Tulare County. | No | No suitable habitat present. |
| *Orcuttia pilosa*<br>hairy Orcutt grass | FE/SE<br>1.B1 | Annual herb; blooms May–September; vernal pools; 150 to 655 feet; scattered occurrences in Tehama, Glenn, Stanislaus, Merced, and Madera Counties. | No | No suitable habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Pseudobahia bahiifolia*<br>Hartweg's golden sunburst | FE/SE<br>1B.1 | Annual herb; blooms March to April; cismontane woodland, valley and foothill grassland; often on acidic clay soils; elevation 50 to 490 feet; widely scattered occurrences from Yuba County south to Fresno County; extirpated from southern California and mostly extirpated from Central Valley. | No | No suitable habitat present. |
| *Pseudobahia peirsonii*<br>San Joaquin adobe sunburst | FT/SE<br>1B.1 | Annual herb; blooms March to April; occurs in cismontane woodland and valley and foothill grassland (on adobe clay) from 295 to 2,625 feet elevation. | No | No suitable habitat present. |
| *Sagittaria sanfordii*<br>Sanford's arrowhead | --/--<br>1B.2 | Perennial rhizomatous herb (emergent); blooms May–October and sometimes into November; marshes and swamps (shallow freshwater); 0 to 2,135 feet; scattered occurrences in northern California, the Central Valley, the Bay Area, and the Los Angeles area. | No | No suitable habitat present. |
| *Tuctoria greenei*<br>Greene's tuctoria | FE/SR<br>1B.1 | Annual herb; blooms May–July and sometimes September; vernal pools; 100 to 3,510 feet; Central Valley from San Joaquin County to Tulare County; valley floor in Tehama, Glenn, and Butte Counties, and the Modoc plateau area. | No | No suitable habitat present. |
| **Invertebrates** | | | | |
| *Bombus crotchii*<br>Crotch bumble bee | --/SC | Nearly endemic to California; occurs in grassland and shrublands in southern and central California; flight period for queens is from late February to late October; flight period for workers and males is from Late March through September; nests underground; likely overwinters in soft soil or under leaf litter; generalist forager. | No | No suitable habitat present. Site heavily disturbed. |
| *Branchinecta conservatio*<br>Conservancy fairy shrimp | --/ST | California endemic found in large, turbid vernal pools and wetlands in valley and foot grassland in the Central Valley. Pools usually found in swales formed by old, braided alluvium and usually last until June. | No | No aquatic habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Branchinecta lynchi*<br><br>vernal pool fairy shrimp | FT/-- | Occur in a variety of vernal pool habitats that range from small, clear pools to large, turbid and alkaline pools; more common in pools less than 0.05 acre, typically as part of larger vernal pool complexes; adults active from early December to early May; pools must hold water for at least 18 days, the minimum to complete the life cycle if temperatures are optimal; eggs are laid in spring and persist through the dry season as cysts; current California distribution includes the Central Valley and coast ranges; threatened by habitat loss, degradation, and fragmentation, and interference with vernal pool hydrology. | No | No aquatic habitat present. |
| *Danaus plexippus*<br><br>monarch butterfly | FC/-- | Migrant; lays eggs on milkweed (primarily *Asclepias* spp.); overwinters along the coast in dense stands of eucalyptus, Monterey pine, and Monterey cypress that provide indirect sunlight, moisture for hydration, protection from winds, and above-freezing temperatures. | No | No suitable wintering or breeding habitat present. |
| *Desmocerus californicus dimorphus*<br><br>valley elderberry longhorn beetle | FT/-- | Requires elderberry shrubs for reproduction and survival, with stems greater than 1 inch; occurs only in the Central Valley north of the San Joaquin River; occurs below 500 feet elevation; eggs laid on elderberry shrubs; larvae burrow into stems for food and metamorphosis; adults emerge from the stem and spend the remainder of their lives on the same shrub or on the ground underneath. | No | No elderberry shrubs present. |
| *Lepidurus packardi*<br><br>vernal pool tadpole shrimp | E/SA/-- | Vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass bottomed swales of unplowed grasslands; some pools are mud-bottomed. | No | No aquatic habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| **Amphibians** | | | | |
| *Ambystoma californiense*<br><br>California tiger salamander | FT/ST<br>SSC | Small salamander found in vernal and seasonal pools and associated grasslands, oak savanna and woodland, and coastal scrub in the Central Valley from Tulare County north to the Sacramento area and along the Central Coast from Santa Barbara County north to the San Francisco Bay; 0–3,200 feet elevation; spends most of the year in small mammal burrows; breeding season is November–February; requires seasonal ponds for breeding and egg laying; can travel more than 3,000 feet between aquatic and upland habitats. | No | No aquatic habitat present on-site. Site has been heavily disturbed for agricultural use for decades. No presumed extant CNDDB records within known dispersal distance of 1.5 miles from project site. One unprocessed CNDDB record approximately 1.5 miles to east of individuals near Fowler Avenue and is separated from project site by Enterprise Canal, which appears to carry water year round and thus acts and a barrier. Nearest seasonal wetland is approximately 0.5 mile to northeast based on NWI mapping and is also separated from project site by Enterprise Canal. |
| *Rana aurora draytonii*<br><br>California red-legged frog | T/CSC/-- | Lowland and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation and associated upland habitat. | No | No aquatic habitat present. |
| *Rana boylii*<br><br>foothill yellow-legged frog | --/ST | Found in aquatic habitats with flowing water and partially shaded by riparian habitat. Streams are shallow and have riffles from rocky substrate. Lays eggs on cobble-size rock. Water must be present for at least 15 weeks for metamorphosis. Rarely found away from permanent water; further distance from water recorded is 165 feet. | No | No aquatic habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Spea hammondii*<br><br>western spadefoot | FC/--<br>SSC | Species relies on vernal pools for breeding where predators cannot become established; open areas with sand or gravelly soils in a variety of habitats: grasslands, coastal scrub, woodlands, chaparral, sandy washes, lowland river floodplains, alkali flats, foothills, and mountains; endemic to California and northern Baja California; distribution is from Redding south throughout the Central Valley and foothills, throughout the South Coast Ranges into coastal southern California to the Transverse and Peninsular mountains; elevation is from sea level to 4,500 feet. | No | No aquatic habitat present on-site. Site has been heavily disturbed for agricultural use for decades. Nearest CNDDB record ~2.0 miles north of project site. Unprocessed CNDDB record ~2.1 miles to southeast. |
| **Reptiles** | | | | |
| *Actinemys [=Emys] marmorata*<br><br>northwestern pond turtle | FC/--<br>SSC | Highly aquatic and diurnally active; found in ponds, lakes, rivers, streams, creeks, marshes, and irrigation ditches with vegetation and rocky/muddy bottoms; wide variety of habitats; needs basking areas near water (logs, rocks, vegetation mats, banks); may enter brackish water and even seawater; digs nest on land near water; range is from north of the San Francisco Bay area south, including the Central Valley. | No | No aquatic habitat present. |
| *Anniella pulchra*<br><br>northern California legless lizard | --/--<br>SSC | Secretive fossorial lizard found in many habitats, especially valley and foothill grassland, chaparral, coastal scrub, and coastal dune; most commonly associated with sandy or loose organic soils with leaf litter; elevation from near sea level to 6,000 feet; may hibernate in inland areas with colder winter temperatures; primarily associated with foothills and mountains from Ventura County north to San Joaquin and Contra Costa Counties, and in the western Sierra Nevada foothills in Fresno and Tulare Counties. | No | No suitable habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Gambelia silus [=sila]*<br><br>blunt-nosed leopard lizard | FE/SE<br>SFP | Occurs in semiarid habitats within the southern Central Valley and Cuyama Valley; habitats typically are flat and have large open areas with scattered shrubs for refuge; uses small mammal burrows for shelter; spends most of the year underground, surfacing in spring/early summer to breed and eat; hatchlings surface in the fall to eat; may interbreed with long-nosed leopard lizard in Cuyama Valley; threatened by habitat loss/fragmentation and drought; elevation from 100–2,400 feet. | No | No suitable habitat present. |
| *Phrynosoma blainvillii*<br><br>coast horned lizard | --/--<br>SSC | Prefers sandy/loose soils in grassland, forests, woodlands, and open chaparral; often found along sand washes and dirt roads with scattered shrubs for refuge; specializes in consuming ants; distribution includes coastal California from Baja California north to the Bay Area, southeastern desert regions, southern Central Valley flats and foothills, and surrounding mounts on drier, warmer slopes; threatened by habitat loss/fragmentation and the spread of invasive ant species displacing native prey; elevation from sea level to 8,000 feet. | No | No suitable habitat present. |
| *Thamnophis gigas*<br><br>giant gartersnake | FT/ST | Highly aquatic snake found in marshes and sloughs, drainage canals, and irrigation ditches; prefers vegetation close to water for basking; does not venture more than 200 feet from aquatic habitat; elevation from sea level to 400 feet; endemic to California; currently ranges from Glenn County to southern edge of San Francisco Bay Delta, and from Merced County to northern Fresno County. | No | No aquatic habitat present. |
| **Birds** | | | | |
| *Agelaius tricolor*<br><br>tricolored blackbird | --/ST<br>SSC | Colonial breeder that prefers freshwater, emergent wetlands with tall, dense cattails or tules, but also thickets of willow, blackberry, wild rose, and tall herbs; breeding colonies are minimum ~50 pairs; forages in pastures, grain fields, and similar habitats near breeding areas. | No | No suitable aquatic habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Aquila chrysaetos*<br><br>golden eagle | --/--<br>FP, WL | The golden eagle is an uncommon resident of mountainous and valley-foothill areas. Nesting occurs on cliff ledges and overhangs or in large trees. Foraging typically occurs in open terrain where small rodent prey is seen while soaring high above ground. This species occurs throughout California except the central valley. | No | No suitable habitat present and project is in the valley portion of Fresno County. |
| *Athene cunicularia*<br><br>burrowing owl | --/--<br>SSC | Occupies a variety of open, semi-arid to arid habitats throughout central and southern California, including desert regions; prefers open habitats with few shrubs or trees; most active around sunrise and sunset; utilizes burrows constructed by mammals year-round for shelter and nesting; well documented in urban areas where patches of undeveloped areas are present (e.g., canals, airports, drainage basins) and in areas of dense agricultural development, particularly where canals provide burrow habitat; forages primarily for rodents and insects within several miles of its burrow, usually in open, grassy habitats if available; has been observed hunting bats and insects around parking lot lights; threats include development resulting in habitat loss/fragmentation. | No | Foraging habitat limited due to disturbance. No suitable burrows present. Site has been heavily disturbed for agricultural use for decades. Nearest CNDDB occurrence is ~6 miles to northwest. |
| *Buteo swainsoni*<br><br>Swainson's hawk | --/ST | Resident and migrant throughout the Central Valley, Klamath Basin, Northeastern Plateau, Mojave Desert, Antelope Valley, and elsewhere; breeds in stands with few trees in juniper-sage flats, riparian areas, and in oak savannahs; usually nests in scattered trees surrounded by foraging habitat; forages primarily for small mammals in grasslands and open desert scrublands or suitable grain fields or livestock pastures; occasionally eats insects, amphibians, reptiles, and birds; usually found near water. | Yes | Suitable nest trees within 0.5 mile of project site. Project site offers limited foraging. Unprocessed CNDDB record of nest recorded in 2018 approximately 4 miles to the west. |
| *Gymnogyps californianus*<br><br>California condor | FE/SE<br>FP | Nests on deep canyons with clefts in rocky walls surrounded by vast expanses of grasslands, chaparral, and savannah for scavenging in mountain ranges. Roosts on ledges or large old-growth trees. Can forage up to 100 miles from nest/roost. | No | Project not located in vicinity of suitable roosting or nesting habitat. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Haliaeetus leucocephalus*<br><br>bald eagle | FD/SE<br>SSC | Winters locally at deep lakes and reservoirs feeding on fish and waterfowl. Locally rare throughout North America. | No | No suitable aquatic habitat present. |
| *Lanius ludovicianus*<br><br>loggerhead shrike | --/SSC/--<br>(nesting) | Nests in shrubs in coastal sage scrub and chaparral habitats or in trees that overlook grasslands; preys over semi-open habitats and feeds primarily on large insects and often skewers prey on a barb or thorn to cache for later feeding. | No | No suitable habitat present. |
| *Vireo bellii pusillus*<br><br>least Bell's vireo | FE/SE | Widespread throughout western Sierra Nevada and coastal valleys and foothills south of Santa Clara County; occurs below 2,000 feet elevation; migrant; winters in Mexico and breeds in California from March to August; nests in dense riparian habitat along streams; prefers willows, cottonwoods, Baccharis, wild blackberry, or mesquite; feeds on insects and some fruits. | No | No suitable riparian habitat present. |
| *Xanthocephalus xanthocephalus*<br><br>yellow-headed blackbird | --/--<br>SSC | Breeds in the Imperial and Colorado River valleys, and the Central Valley; occasionally in the Coast Ranges; migrant or uncommon winter resident; breeds mid-April to late July; nests and roosts in colonies over water in fresh emergent wetlands, especially cattails, tules, or other emergent plants; feeds on insects, spiders, and snails, and occasionally grains. | No | No suitable aquatic habitat present. |
| **Mammals** | | | | |
| *Antrozous pallidus*<br><br>pallid bat | --/--<br>SSC | Occurs in low elevations in deserts, grasslands, shrublands, woodlands, and forest throughout California from sea level up through mixed conifer forests; most common in open, dry, habitats with rocky areas for roosting; roosts usually in groups of 20 or more; day roosts in caves, crevices, mines, and occasionally hollow trees and buildings; night roosts sometimes in more open areas; roost must protect against high temps; maternity colonies form in April; hibernates in winter; needs water; very sensitive to roost disturbance. | No | No suitable habitat present. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Corynorhinus townsendii*<br><br>Townsend's big-eared bat | --/--<br>SSC | Found throughout California in a variety of habitats. Roosts in caves, mines, tunnels, building, or other human-made structures. Requires water. Hibernates. Extremely sensitive to human disturbance. | No | No suitable roosts present and project site heavily disturbed. |
| *Dipodomys nitratoides exilis*<br><br>Fresno kangaroo rat | FE/SE | Occurs on alkali open grassland on bare alkaline clay-based soils; nocturnal species; burrows with tunnels approximately 12 to 15 inches below ground; threatened by predation and disease; historically occurred on the valley floor in Kings, Fresno, Madera, and Merced counties, but may be extirpated. | No | No suitable habitat present. |
| *Euderma maculatum*<br><br>spotted bat | --/--<br>SSC | Found in a wide variety of habitats from grasslands and deserts through mixed conifer forests. Roosts on rock crevices in cliffs or caves. Moth specialist. Feeds over water. Drinks water. | No | No suitable roosts present. |
| *Lasiurus frantzii*<br><br>western red bat | --/--<br>SSC | Roosts in trees in woodland and forest habitats from sea level to up through mixed conifer forests. Prefers habitat edges with open areas for foraging. Feeds on variety of insects. Requires water. Solitary but may nurse in colonies. Forages up to 0.6 miles from day roost. | No | No suitable roosts present. |
| *Taxidea taxus*<br><br>American badger | --/--<br>SSC | Found throughout California except in the North Coast area; open grasslands, deserts, and edge of scrub and woodland habitats; requires loose soils; does not occur in irrigated agriculture; active year-round, both nocturnal and diurnal; young are born in March and April; primarily eats small mammals and occasionally reptiles, insects, birds, eggs, and carrion; capable of digging a new den each night. | No | Project and vicinity heavily disturbed by development and intensive agricultural uses. No suitable dens observed. |

## Table D.1: Special-Status Plant Species in the Regional Vicinity of the Project Site

| Scientific Name<br>Common Name | Status<br>(FESA/CESA<br>CRPR/CDFW) | Habitat Requirements | Potential to Occur | Rationale |
|---|---|---|---|---|
| *Vulpes macrotis mutica*<br><br>San Joaquin kit fox | FE/ST | Endemic to the Central Valley; San Joaquin Valley, Carrizo Plain, Salinas Valley, Cuyama Valley, and other small valleys in western foothills; arid to semi-arid grasslands, open shrublands, savannahs, and grazed lands with loose-textured soils; highly adaptable and documented in urban developed areas; uses burrows year-round for shelter, escape from predators, and rearing young; will use man-made structures, such as pipes, for denning; feeds primarily on small mammals but will also consume birds, reptiles, and insects and scavenge for human food; intensively maintained agricultural areas avoided; threatened by habitat loss and fragmentation, vehicle strikes, and disease; current mange outbreak in urban population in Bakersfield and in nearby natural areas. | No | Area heavily disturbed/developed for urban, rural residential, and intensive agricultural uses. Project site heavily disturbed. No suitable burrows/dens present. |

Notes:

CRPR (California Rare Plant Rank):
1A Presumed Extinct in California
1B Rare, Threatened, or Endangered in California and elsewhere
2A Plants presumed extirpated in California, but more common elsewhere
2B Plants Rare, Threatened, or Endangered in California, but more common elsewhere

CRPR Threat Code Extension:
.1 Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat)
.2 Fairly endangered in California (20-80% occurrences threatened)
.3 Not very endangered in California (<20% of occurrences threatened)

CDFW = California Department of Fish and Wildlife
CESA = California Endangered Species Act
FESA = Federal Endangered Species Act

## INTRODUCTION

The project involves the development of a residential development on a tract of three parcels totaling 37.92 acres, located on the south side of Behmeyer Avenue, between Peach Avenue on the west and Minnewawa Avenue on the east, in the City of Clovis, California (Figures 1 and 2).

The project area lies in the northeast ¼ of Section 19, Township 12 S, Range 20 E, mapped on the Friant 7.5' USGS topographic quadrangle (Figure 1).

Melinda A. Peak, senior historian/archeologist with Peak & Associates, Inc. served as principal investigator for the study with Michael Lawson, senior archeologist (resumes, Appendix 1), completing the field survey of the project area.

## STATE REGULATIONS

State historic preservation regulations affecting this project include the statutes and guidelines contained in the California Environmental Quality Act (CEQA; Public Resources Code sections 21083.2 and 21084.1 and sections 15064.5 and 15126.4 (b) of the CEQA Guidelines). CEQA Section 15064.5 requires that lead agencies determine whether projects may have a significant effect on archaeological and historical resources. Public Resources Code Section 21098.1 further cites: A project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

An "historical resource" includes, but is not limited to, any object, building, structure, site, area, place, record, or manuscript that is historically or archaeologically significant (Public Resources Code section 5020.1).

Advice on procedures to identify such resources, evaluate their importance, and estimate potential effects is given in several agency publications such as the series produced by the Governor's Office of Planning and Research (OPR), CEQA and Archaeological Resources, 1994. The technical advice series produced by OPR strongly recommends that Native American concerns and the concerns of other interested persons and corporate entities, including, but not limited to, museums, historical commissions, associations, and societies be solicited as part of the process of cultural resources inventory. In addition, California law protects Native American burials, skeletal remains, and associated grave goods regardless of the antiquity and provides for the sensitive treatment and disposition of those remains (California Health and Safety Code Section 7050.5, California Public Resources Codes Sections 5097.94 et al).

**The California Register of Historical Resources (Public Resources Code Section 5020 et seq.)**

The State Historic Preservation Office (SHPO) maintains the California Register of Historical Resources (CRHR). Properties listed, or formally designated as eligible for listing, on the National Register of Historic Places are automatically listed on the CRHR, as are State Landmarks and Points of Interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

For the purposes of CEQA, an historical resource is a resource listed in, or determined eligible for listing in the California Register of Historical Resources. When a project will impact a site, it needs to be determined whether the site is an historical resource. The criteria are set forth in Section 15064.5(a) (3) of the CEQA Guidelines, and are defined as any resource that does any of the following:

A. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

B. Is associated with the lives of persons important in our past;

C. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

D. Has yielded, or may be likely to yield, information important in prehistory or history.

In addition, the CEQA Guidelines, Section 15064.5(a) (4) states:

The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code section 5020.1(j) or 5024.1.

**California Health and Safety Code Sections 7050.5, 7051, And 7054**

These sections collectively address the illegality of interference with human burial remains, as well as the disposition of Native American burials in archaeological sites. The law protects such remains from disturbance, vandalism, or inadvertent destruction, and establishes procedures to be

implemented if Native American skeletal remains are discovered during construction of a project, including the treatment of remains prior to, during, and after evaluation, and reburial procedures.

**California Public Resources Code Section 15064.5(e)**

This law addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction. The section establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project and establishes the Native American Heritage Commission as the entity responsible to resolve disputes regarding the disposition of such remains.

**Assembly Bill 52**

Assembly Bill (AB) 52 establishes a formal consultation process for California tribes as part of CEQA and equates significant impacts on tribal cultural resources with significant environmental impacts. AB 52 defines a "California Native American Tribe" as a Native American tribe located in California that is on the contact list maintained by the Native American Heritage Commission. AB 52 requires formal consultation with California Native American Tribes prior to determining the level of environmental document if a tribe has requested to be informed by the lead agency of proposed projects. AB 52 also requires that consultation address project mitigation measures for significant effects, if requested by the California Native American Tribe, and that consultation be concluded when either the parties agree to measures to mitigate or avoid a significant effect, or the agency concludes that mutual agreement cannot be reached. Under AB 52, such measures shall be recommended for inclusion in the environmental document and adopted mitigation monitoring program if determined to avoid or lessen a significant impact on a tribal cultural resource.

## CULTURAL SETTING

**Archeology**

The Central Valley region was among the first in the state to attract intensive fieldwork, and research has continued to the present day. This has resulted in a substantial accumulation of data, but the emphasis has been in the northern portion of the valley. In the early decades of the 1900s, E.J. Dawson explored numerous sites near Stockton and Lodi, later collaborating with W.E. Schenck (Schenck and Dawson 1929). By 1933, the focus of work was directed to the Cosumnes locality, where survey and excavation were conducted by the Sacramento Junior College (Lillard and Purves 1936). Excavation data, in particular from the stratified Windmiller site (CA-SAC-107), suggested two temporally distinct cultural traditions.

Later work at other mounds by Sacramento Junior College and the University of California, Berkeley, enabled the investigators to identify a third cultural tradition, intermediate between the previously postulated Early and Late Horizons. The three-horizon sequence, based on discrete changes in ornamental artifacts and mortuary practices, as well as on observed differences in soils within sites (Lillard, Heizer and Fenenga 1939), was later refined by Beardsley (1954). An expanded definition of artifacts diagnostic of each period was then developed, and its application extended to parts of the central California coast. Traits held in common allow the application of this system within certain limits of time and space to other areas of prehistoric central California.

In the southern San Joaquin Valley, with the exception of Hewes's excavation at CA-FRE-48 (the Tranquility Site), the foci of early investigations have been the old shorelines of the interior lakes: Tulare, Kern, and Buena Vista. In 1899, Dr. P. M. Jones directed fieldwork in the Buena Vista-Tulare Lake area of Kern County. Jones investigated 150 mounds and conducted trenching of several sites including CA-KER-53. In 1909, N. C. Nelson investigated prehistoric Site CA-KER-49, which is located to the west of Buena Vista Lake. Later, four surveys and excavations were conducted in the same locale under the auspices of the University of California. A compilation of these investigation results was published in 1926 by Gifford and Schenck.

As a result of this early work, an elaborate culture complex was defined for the late prehistoric period. This complex can be ascribed probably to the Yokuts and their direct ancestors. The material culture of this late temporal period complex included steatite vessels and beads, finely-made projectile points, pottery, shaped stone mortars, *Tivela* disc beads, use of asphaltum, and the presence of metates and manos. Flexed burials were the predominant interment mode. Earlier complexes underlying the late cultural expressions were represented by chipped stone crescents, large projectile points, atlatl spurs, and weights. Mortuary practices, generally thought to be related, include extended rather than flexed burial position, a situation analogous to that of the northern valley (Gifford and Schenck 1926; Lillard, Heizer, and Fenenga 1939; Moratto 1972).

Presence of "Early Man," although not found in direct association with extinct animals, is demonstrated by the frequency of chipped stone crescents and fluted points similar to those of the Clovis-Folsom Complex in the American Southwest. Although fluted points have been found near the shores of Tulare Lake, an area that has also produced surface finds of extinct mammal bone of Pleistocene age, the association is not substantiated by controlled excavations and remains speculative (Riddell and Olsen 1969). Most of the point collection had been acquired by D. Witt over a period of 30 years.

Under the direction of Wedel (1941), the Civil Works Administration, in conjunction with the Smithsonian Institution, initiated the first major excavations using stratigraphic controls. Investigations of CA-KER-39 and CA-KER-60 as well as several smaller sites near Buena Vista Lake produced evidence of two distinct cultural entities or occupation periods. Wedel lacked

methods for dating these two entities by cross-comparison of the assemblages, he tentatively stated that the early occupation at Buena Vista Lake appeared to be temporally older and less developed than the Early Horizon (Windmiller Pattern) of the Delta region. He compared this early component to the Oak Grove or Milling Stone culture of the Santa Barbara area (Rogers 1939). He divided the later cultural entity into two distinct phases, both clearly distinguished from the earlier cultural phase by artifact types. Wedel (1941:144-145) estimated that neither of these cultural periods exceeded 1500 B.P. (years Before the Present). Later, other investigators proposed far earlier ages for these early occupations, with dates ranging from 2000 to 7000 B.P. (Baumhoff and Olmstead 1963, 1964; Heizer 1964; Meighan 1959).

Later investigations in 1963 and 1964 at CA-KER-116 near Buena Vista Lake produced materials similar to Wedel's early occupation. These materials occurred in the lower levels of the "upper deposit," while an even deeper cultural deposit yielded materials similar to those of the San Dieguito Complex. Artifacts included a chipped stone crescent, crude point fragments, and an atlatl spur. Radiocarbon age determinations on shell from the lowest cultural levels returned a date of circa 8200 B.P. (Fredrickson and Grossman 1966, 1977; Fredrickson 1967).

Despite the previously mentioned investigations, the prehistory of the southern San Joaquin remains as yet poorly understood, without a tightly defined chronological sequence of cultural development.

**Ethnology**

Ethnographic literature is often uncertain in definition of cultural boundaries for Indian groups. Early displacement by white intrusion resulted in population shifts to avoid conflict with the Spanish, and later with the miners and settlers. The ravages of disease and warfare decimated the native people, further weakening cultural identity. Informants were often uncertain of original territories of the various tribal groupings.

The Yokuts were members of the Penutian language family which held lands of the Central Valley, San Francisco Bay Area, and the Pacific Coast from Marin County to near Point Sur. The Yokuts differed from other ethnographic groups in California as they had true tribal divisions with group names (Kroeber 1925). Each tribe spoke a particular dialect, common to its members, but similar enough to other Yokuts that they were mutually intelligible (Kroeber 1925).

Trade was well-developed, with mutually beneficial interchange of needed or desired goods. Obsidian, rare in the San Joaquin Valley, was obtained by trade with Paiute and Shoshoni groups on the eastern side of the Sierra Nevada, where numerous sources of this material are located, and to some extent from the Napa Valley to the north. Shell beads, obtained by the Yokuts from coastal

people, and acorns, rare in the Great Basin, were among many items exported to the east by Yokuts traders (Davis 1961).

Economic subsistence was based on the acorn, with substantial dependency on gathering and processing of wild seeds and other vegetable foods. The rivers, streams, and sloughs which formed a maze within the valley provided abundant food resources such as fish, shellfish, and turtles. Game, wild fowl, and small mammals were trapped and hunted to provide protein augmentation of the diet.

In general, the eastern portion of the San Joaquin Valley provided a lush environment of varied food resources, with the estimated large population centers reflecting this abundance (Cook 1955; Baumhoff 1963).

The project area lies close to the line used by ethnographers to identify the divide between Northern Valley Yokuts and Southern Valley Yokuts, more likely to be in the northern part of Southern Valley Yokuts territory. Settlements were oriented along the water ways, with their village sites normally placed adjacent to these features for their nearby water and food resources. House structures varied in size and shape (Latta 1949; Kroeber 1925). The housepit depressions ranged in diameter from between 3 to 18 meters.

Latta (1949:99) reported that a village of 200 to 300 Yokuts might have four or five large houses that were used for ten or twelve years or until a family member died, at which time the Indians burned the house in which the death had occurred. If a sick or aged person died outside the dwelling, the family did not burn the house. When a Northern Yokuts died, his body was cremated or buried in a flexed position. Southern tribes normally buried their dead, although they did cremate shamans, persons who died away from their village and, among the Tachi, persons of great importance.

The Yokuts experienced severe depopulation after contact with the Spanish and subsequent explores. The most devastating impacts of the Spanish colonization effort were not the result of military conflicts, but came from Old World diseases newly introduced to the native people.

**Historical Context**

**Early Explorations**

The early recorded inhabitants of the region were members of the Yokuts tribe. Although the Spanish missions were established closer to the Pacific coast between 1769 and 1817, the general project area was first visited in the early 1800s by Spanish explorers, who visited the San Joaquin Valley with three goals: to search for runaway neophytes from the missions in the coastal regions,

to punish the Indian raiders, and to select sites for new missions. In 1806, a group led by Gabriel Moraga and Father Pedro Muñoz, left Mission San Juan Bautista heading north to about the Mokelumne River. They then turned south, and travelled along the edge of the mountains crossing the San Joaquin River and passing through Tejon Pass, arriving at Mission San Fernando. In 1815, José Dolores Pico marched an expedition group from Monterey into the region. Following the San Joaquin River, he passed through the area in search of runaways, traveling as far south as the Kern River. The expedition returned to the starting point in Monterey with nine prisoners and a number of horses.

After control of California passed from Spain to Mexico in 1822, Mexican explorations into the interior continued, with José Dolores Pico conducting a major expedition along the San Joaquin River in 1825-1826. This expedition was considered successful in that some neophytes were captured, hostile Indians killed, some of the tribal groups intimidated, and some stolen horses recovered.

In 1828, Sebastián Rodríguez led a similar expedition into the same region. His expedition captured a number of neophytes as well as some of the stolen horses, an item that had become an important dietary staple for the Indian tribes in the San Joaquin Valley region (Beck and Haase 1974).

The expeditions did not leave physical evidence, but there were definitely major affects to the Native American populations. Causing even more of an effect on the native population were the diseases brought in to the Native populations of the Central Valley in the early 1830s.

**Ranchos**

In Fresno County, there was only one early land grant, a rancho along the current southern border of the county: Laguna de Tache. The era of the Spanish and Mexican land grants did not directly affect the APE.

**Fresno Region History**

The lands of the project region were recognized early in time for their agricultural value. Early land use included grazing and dry lands crops such as grains. Over time, a system of ditches was constructed to bring a reliable source of water to much more of the county, allowing the planting of orchards and vineyards, as well as the cultivation of a wider variety of crops. In addition, transportation for the farm products to wider markets was aided by the addition of railroad systems in the region (Kyle 2002).

**Clovis**

The extension of the railroad system throughout the San Joaquin Valley allowed the increased expansion of a market for the agricultural production of the region. A branch line of the Southern Pacific Railroad (first known as the Pollasky Railroad or the San Joaquin Railroad) was built through this region circa 1891. Marcus Pollasky served as the promoter, and monies were raised locally for the construction costs. Clovis Cole, the owner of a large wheat ranch, donated land for the route, and a station was established here on the line and named Clovis (Gudde 1969; City of Clovis 1962).

After the completion of the railroad, the construction of the flume from Shaver Lake to the east was soon completed by the Fresno Flume and Irrigation Company. The 45-mile-long flume could deliver 200,000 board feet of lumber through the V-shaped watercourse in a 24-hour period. At the end of the flume, there was a finishing and distributing plant. Other, better grade lumber was delivered to Clovis down Tollhouse Grade, hauled by ox and horse teams. In the early years, 140 men were employed by the lumber company, with an annual payroll of $450,000.

The Clovis lumber plant occupied a 40-acre site. The factory, warehouse, a planing mill, and engine house all burned to the ground in 1898, but were soon rebuilt. As many as 400 men were employed by the company. The mill was located on the south side of Fifth Street (City of Clovis 1962; Clovis Centennial Book Committee 2011).

The mill in Clovis produced "ordinary lines of lumber," shakes, trays, sweat boxes, raisin boxes, orange boxes, cedar posts, ties, poles, and pine and oak cordwood (*Fresno Republican* 1897: 96). The ever-increasing agricultural use of the San Joaquin Valley, due to improvements and expansion of irrigation systems, led to a large market for the fruit packing boxes, allowing shipment of the produce to a wider marketplace.

Clovis was laid out by a licensed surveyor, working for the co-owners of the land: Clovis Cole, Clarence Pallos, and George Owen. Early homes were utilitarian, and the streets were ungraded (City of Clovis 1962).

The town's population expanded rapidly from about 500 residents in 1905 to about 1,000 in 1910. Nearby, the population was increasing within the local rural agricultural colonies, with large acreages broken up into 20-acre tracts advertised for sale to Midwesterners. By 1919, local population had grown to 1,500. At this point, the lumber business is still the main support of the economy, but the area produced huge crops of Malaga grapes and figs (Clovis Centennial Book Committee 2011; Vandor 1919:269)

For the first 21 years, there was no organized government in Clovis. Late in 1911, an election was held, and the city incorporated in 1912. Most of the early businesses in town were located on Front Street, now known as Clovis Avenue, on the west side of the tracks (City of Clovis 1962).

## RESEARCH

A record search was conducted for the APE and a 0.25-mile radius at the Southern San Joaquin Valley Archaeological Information Center of the California Historical Resources Information System on May 13, 2024 (RS#24-207, Appendix 2). No sites have been recorded in the project area. The Enterprise Canal (P-10-005934) is located within the project area buffer radius. Two reports cover studies in portions of the project area, and one covers a portion of the search radius buffer.

## FIELD ASSESSMENT

Mike Lawson (resume, Appendix 1) completed the field survey of the project area on June 15, 2024 with complete coverage.

The survey area consists of several agricultural fields in a rectangular shape with a single-family home and outbuildings near the center accessed by Behymer Avenue. Only the front or street view of the residence is visible due to a privacy screen surrounding the building complex.

All connecting agricultural plots are flat, likely leveled, with raised dirt access roads between and around them. Wire fencing protects the field edges along the avenue, but the remaining boundaries are open. Irrigation equipment typical for orchards and seed planting is in place throughout the survey area.

Soil is uniformly a medium-brown silty loam throughout all the growing blocs with a very slight difference in shade due to varying moisture levels. Cobble and pebble fraction is light to moderate with components being granitic, sandstone, and meta volcanic. No bedrock outcrops or boulders were observed.

Typical native and introduced plants and trees along the fields were observed including valley oak, Russian thistle, datura, goats-head, wild radish, and brome. Orchard trees appeared to be almond. Other fields were fallow at time of survey.

Due to low sensitivity for cultural resources, parallel transects of no more than 10 meters apart were walked to obtain complete coverage. The survey routes followed furrows in dirt fields, dirt roadways and open spaces between orchard trees. At time of survey ground visibility was very good due to farming activities.

The residence was difficult to observe from the roadside, but it is clearly quite recent in construction date with recent alterations such as, replacement doors, vinyl framed windows, and recent composition roof. The building was field recorded, and a site record prepared (Appendix 3).

No other prehistoric or historical artifacts, features or other remains were observed within the survey area.

## SITE DESCRIPTION/EVALUATION

This is a ranch style house constructed in 1963, per County Assessor, that is more complex in plan than most houses of that style and era. This is basically a cross gabled version of the ranch style, the type found in about 40% of ranch houses (McAlester 2015:598) but this has two front-facing cross gables, much less common, and one of these has what amounts to a full width dormer on top of the cross gable in the form of another low gabled roof that does not extend to the end of the main roof. The rear of the building is also unusual in that there are several extensions, one being an extension of the main roof at a lower pitch to cover a large back patio. About 140 feet south of the residence are two modern utility buildings: a flat roofed equipment shelter, and a small barn.

Windows are primarily vinyl framed sliders but there is a picture window on the front (northern) elevation facing Behymer Avenue. Siding is vertical plank over a faux rock course. The eaves are closed and the roof is a composite that appears relatively recent.

In all, this is a variation on the ranch house that lacks many of the most characteristic elements of the style. In particular, the essential simplicity characteristic of the early ranch houses of this era is lost in the complex roof treatment. Later ranch houses of the 1970s and early 1980s are often more elaborate. This example, however, is not in any recognized subtype of the basic ranch form.

This building is not eligible for the California Register of Historical Resources, lacking association with important events or people in history, as well as no architectural distinction.

## RECOMMENDATIONS

Although no prehistoric sites were found during the survey, there is a slight possibility that a site may exist and be totally obscured by vegetation, fill, or other historic activities, leaving no surface evidence. Should artifacts or unusual amounts of stone, bone, or shell be uncovered during construction activities, an archeologist should be consulted for on-the-spot evaluation of the finding. If the bone appears to be human, state law requires that the Fresno County Coroner be contacted. If

the Coroner determines that the bone is human and is most likely Native American in origin, he must contact the Native American Heritage Commission (916-322-7791).

## PROFESSIONAL EXPERIENCE

Ms. Peak has served as the principal investigator on a wide range of prehistoric and historic excavations throughout California. She has directed laboratory analyses of archeological materials, including the historic period. She has also conducted a wide variety of cultural resource assessments in California, including documentary research, field survey, Native American coordination, and report preparation.

In addition, Ms. Peak has developed a second field of expertise in applied history, specializing in site-specific research for historic period resources. She has completed many historical research projects for a wide variety of site types.

Through her education and experience, Ms. Peak meets the Secretary of Interior Standards for historian, architectural historian, prehistoric archeologist, and historic archeologist.

## EDUCATION

M.A. - History - California State University, Sacramento, 1989
Thesis: *The Bellevue Mine: A Historical Resources Management Site Study in Plumas and Sierra Counties, California*
B.A. - Anthropology - University of California, Berkeley

## PROJECTS

In recent months, Ms. Peak has completed several determinations of eligibility and effect documents in coordination with the Corps of Engineers for projects requiring federal permits, assessing the eligibility of many sites for the National Register of Historic Places.

She has also completed historical research projects on a wide variety of topics for many California projects including the development of navigation and landings on the Napa River, wineries, farmhouses dating to the 1860s, bridges, an early roadhouse, Folsom Dam, and a section of an electric railway line.

In recent years, Ms. Peak has prepared numbers of cultural resource overviews and predictive models for blocks of land proposed for future development for general and specific plans. She has been able to direct many surveys of these areas, allowing the model to be tested.

She served as principal investigator for the multi-phase Twelve Bridges Golf Club project in Placer County. She served as liaison with the various agencies, helped prepare the historic properties treatment plan, managed the various phases of test and data recovery excavations, and completed the final report on the analysis of the test phase excavations of many prehistoric sites. She is currently involved as the principal investigator for the Teichert Quarry project adjacent to Twelve Bridges in the City of Rocklin, coordinating contacts with Native Americans, the Army Corps of Engineers, and the Office of Historic Preservation.

Ms. Peak has served as project manager for many major survey and excavation projects in recent years, including the many surveys and site definition excavations for the 172-mile-long Pacific Pipeline proposed for construction in Santa Barbara, Ventura, and Los Angeles counties. She also completed an archival study in the City of Los Angeles for the project. She also served as principal investigator for a major coaxial cable removal project for AT&T.

Additionally, she has completed hundreds of small surveys, served as a construction monitor at several urban sites, and conducted emergency recovery excavations for sites found during monitoring. She has directed the excavations of several historic complexes in Sacramento, Placer, and El Dorado Counties.

Ms. Peak is the author of a chapter and two sections of a published history (1999) of Sacramento County, *Sacramento: Gold Rush Legacy, Metropolitan Legacy*. She served as the consultant for a children's book on California, published by Capstone Press in 2003 in the Land of Liberty series.

## PROFESSIONAL EXPERIENCE

Mr. Lawson has compiled an excellent record of undertaking excavation and survey projects for both the public and private sectors over the past thirty years. He has conducted many surveys throughout northern California, central California, and Hawaii, as well as serving as an archeological technician, site monitor, crew chief and field director for a number of excavation projects.

Mr. Lawson is qualified by the Bureau of Land Management as a field director for archeological surveys and excavations. In 2022, he led teams as the field director on several field surveys in the Sierras for the proposed undergrounding of PG&E transmission lines, dealing with both historic and prehistoric cultural resources. Lawson works for several firms based in the Sacramento Area and Bay Area.

## EDUCATION

B.A. - Anthropology - California State University, Sacramento

Special Course: Comparative Osteology. University of Tennessee, Knoxville. Forensic Anthropology Center. January 2018.

The special course included: intensive lab and outdoor study with human example from outdoor research facility, including typical and non-metric examples, compared with the fifty non-human species most confused with human remains. Work at the outdoor research facility "The Body Farm" study included survey, photography, collection, and identification of faunal and human bone fragments, with a Power Point presentation discussing finds.

## EXPERIENCE

- Extensive monitoring of open space, streets and project development areas for prehistoric period and historic period resources. Areas monitored include Sutter Street in Folsom; Mud Creek Archeological District in Chico; Camp Roberts, San Luis Obispo County; Avila Beach, San Luis Obispo County; Edgewood Golf Course, South Lake Tahoe; Davis Water Project, Davis; Star Bend levee section, Sutter County; Feather River levees, Sutter County; Bodega

Bay, Sonoma County; San Jose BART line extension, Santa Clara County; and numerous sites for PG&E in San Francisco.

- Over thirty years of experience working in cultural resource management, volunteer, and academic settings in California historic, proto-historic, and prehistoric archaeology.

- Expertise in pedestrian survey, excavation, feature (including burial) exposure, laboratory techniques, research. Field positions include field director, assistant field director, crew chief and lead technician.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Invoices for Information Center services will be sent under separate cover from the California State University, Bakersfield Accounting Office.

Thank you for using the California Historical Resources Information System (CHRIS).

Sincerely,

Celeste M. Thomson

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This is a ranch style house constructed in 1963, per County Assessor, that is more complex in plan than most houses of that style and era. This is basically a cross gabled version of the ranch style, the type found in about 40% of ranch houses (McAlester 2015:598) but this has two front-facing cross gables, much less common, and one of these has what amounts to a full width dormer on top of the cross gable in the form of another low gabled roof that does not extend to the end of the main roof. The rear of the building is also unusual in that there are several extensions, one being an extension of the main roof at a lower pitch to cover a large back patio. About 140 feet south of the residence are two modern utility buildings: a flat roofed equipment shelter and a small barn.

Windows are primarily vinyl framed sliders but there is a picture window on the front (northern) elevation facing Behymer Avenue. Siding is vertical plank over a faux rock course. The eaves are closed and the roof is a composit tnat appears relatively recent.

In all, this is a variation on the ranch house that lacks a number of the most characteristic elements of the style. In particular, the essential simplicity characteristic of the early ranch houses of this era is lost in the complex roof treatment. Later ranch houses of the 1970s and early 1980s are often more elaborate. This example, however, is not in any recognized subtype of the basic ranch form.

# MEMORANDUM

| | |
|---|---|
| **To:** | Christopher Kelly, City of Clovis |
| **From:** | Heather Bashian, PE |
| **Date:** | October 24, 2024 |
| **Subject:** | Water Infrastructure Investigation for a Single-Family Residential Development at the southeast corner of Peach and Behymer Avenues (DRC 2023-045 or Tentative Tract Map 6482) |

Provost and Pritchard Consulting Group has prepared this technical memorandum summarizing the findings of our investigation into the water system infrastructure required to serve a proposed development located at the northeast corner of Peach and Behymer Avenues (APNs 556-010-28 and 29).

## PROJECT INFORMATION

The Project covers an area of approximately 36.9 gross acres within the Northwest Village planning area. The entire Project is within the Kings River service area for FID, which means the Project has access to water from the Kings River as its source of supply. The existing project site consists of residences and residential outbuildings, and agriculture uses. The proposed use will consist of approximately 266 single family residential units, equating to 7.2 units per acre, consistent with the land use designation of medium high density residential, consistent with the planned land use for the area.

The project straddles the pressure zone (PZ) boundary (Zone 1 and Zone 2) of the water system and the understanding is the City does not want to create an interconnection between the pressure zones within a residential development (i.e., not on a major road/intersection). For this reason, the evaluation of the Project has been prepared to determine what master planned, or additional, water infrastructure would be necessary for this Project to proceed. To accomplish this, the infrastructure conditioned on other preceding projects in the area has been documented and, qualitatively, the necessary infrastructure to serve this Project has been evaluated. This evaluation was not completed with a hydraulic model, at the direction of City staff.

## ASSUMPTIONS

Below is a list of assumptions that will be made for this investigation:

- Proposed developments will comply with the City's two points of connection requirement.
- Master planned facilities near the Project are existing, unless otherwise specifically noted.
- The developer is responsible for sizing all water mains and other water related infrastructure internal to the Project.
- Water system demands will be based on unit demand from the City of Clovis Water Master Plan Update, Phase III (Provost & Pritchard, 2018).
- The first phase of water storage tank T-9 or T-6 (3.5 million gallons of storage in PZ2) will be evaluated for inclusion in the Project.
- Water system improvements associated with Tract maps 6205, 6343, and 6200, and DRC 2023-024 (Behymer & Willow Avenues) will be assumed to be fully built out. Water system improvements associated with Vista Ranch are assumed to not be constructed for purposes of this analysis.

## WATER DEMAND

Potable water demands for the Project were estimated using land-use-based unit water demand factors from the WMP. Table 1 summarizes unit demand factors used to estimate demand for typical planning conditions such as annual average, maximum day, and peak hour and the total water usage for each demand category. Water usage for each demand category was estimated by multiplying gross acreage of land use type by its respective unit demand.

Table 1. Summary of Unit Water Demands and Total Water Demands

| LAND USE | AREA (AC) | ANNUAL AVERAGE | | MAXIMUM DAY | | PEAK HOUR | |
|---|---|---|---|---|---|---|---|
| | | AFY/AC | AFY | GPM/AC | GPM | GPM/AC | GPM |
| Existing/Proposed – Medium-High Density Residential | 36.9 | 3.30 | 121.8 | 3.48 | 128.3 | 6.14 | 226.5 |

Notes:
1. Source for unit water demand values was Table 5-3.1 in WMP.
2. Abbreviations: AFY = Acre-feet per year, gpm = gallons per minute, ac = acre(s)

## WATER SUPPLY

Urbanization within Clovis occurs both inside and outside the Kings River service area for FID, therefore not all lands have access to this water source. Lands generally located south and west of the Enterprise Canal are within the Kings River service area and as such are entitled to an average annual allotment of approximately 2.24 acre-feet per acre (AF/ac). Some land uses within the City have unit demands greater than the 2.24 AF/ac supply available. The City adopted an ordinance requiring new development with demands exceeding the allotment to pay fees, so the City can acquire additional water supply to serve the development. Since the entirety of the Project is within the FID service area, water from the Kings River is available to offset a portion of the anticipated annual demand of 19.0 acre-feet. See Table 2 for summary of reconciliation of supply and demand for existing and proposed land use conditions.

Table 2. Summary of Unit Water Demands by Land Use

| LAND USE | AVERAGE DAY DEMAND (AFY) | FID ENTITLEMENT (AFY) | ADDITIONAL SUPPLY REQUIRED (AFY) |
|---|---|---|---|
| Existing/Proposed – Medium-High Density Residential | 121.8 | 82.7 | (39.1) |

## INFRASTRUCTURE

This evaluation will discuss infrastructure in three ways:

- Existing infrastructure: this is understood to be constructed and operational as of the date of this memorandum (see **Figure 1**)
- Conditioned infrastructure: this is understood to be planned for construction with another project that preceded this evaluation; it may or may not be constructed and operational when this Project is operational (see **Figure 2**)
- Recommended infrastructure: this is the infrastructure recommended for development in addition to the existing and conditioned infrastructure; if any conditioned infrastructure is not constructed and operational when this Project is operational, additional recommended infrastructure will likely be necessary (see **Figure 2**)

## EXISTING INFRASTRUCTURE

There is no existing infrastructure immediately adjacent to the Project. The nearest existing infrastructure is the 12-inch water main in Willow Avenue and the infrastructure associated with Tract Map (TM) 6200, between Shepherd and Perrin Avenues and Clovis and Sunnyside Avenues. Other existing infrastructure in the larger vicinity is shown on **Figure 1.**

## CONDITIONED INFRASTRUCTURE

The following is a list of the major infrastructure, most as shown in the WMP, that has been conditioned on nearby projects (shown with gray highlight in **Figure 2**) that would impact this Project's ability to have reliable and sufficient water supply access. Some infrastructure is conditioned on multiple projects and is therefore stated more than once.

### DRC 2023-024 (WILLOW AND BEHYMER AVENUES)

- **P-16** (portion): 12-inch water main in Behymer Avenue, along project frontage
- **W-46**: City Well near Willow and Behymer Avenues

### DRC 2023-030 (CLOVIS AND PERRIN AVENUES)

- **P-3/4/5/6**: WMP capital improvement projects P-3 and P-4 or P-5 and P-6 must be operational prior to the project being operational to enhance the redundancy in PZ2
- **P-35** (portion): 12-inch water main in Minnewawa Avenue, along project frontage
- **P-36**: 12-inch water main in Clovis Avenue from Baron Avenue to Perrin Avenue (P-36)
- Non-master planned: 12-inch water main in Perrin Avenue from Clovis Avenue to approximately 360 feet west of Clovis Avenue along Project frontage

### TRACT 6205

- **P-3/4**: WMP capital improvement projects P-3 and P-4 must be operational prior to the project being operational to enhance the redundancy in PZ2
- **P-39**: 24-inch water main in Perrin Road from Sunnyside Avenue to Marion Avenue
- **P-40**: 24-inch water main in Sunnyside Avenue from Pryor Road to Perrin Road
- Non-master planned: 12-inch water main in Pryor Road that connects through the project from Sunnyside Avenue to Shepherd Avenue

### TRACT 6343

- **P-18** (portion): 24-inch water main in Behymer Avenue from Baron Avenue, along project frontage
- **P-38**: 24-inch water main in Baron Avenue from Perin Avenue to Behymer Avenue

### TRACT 6375

- **P-35** (portion): 12-inch main in Minnewawa Avenue
- **P-36** (portion): 12-inch main in Clovis Avenue
- Tank **T-6** (portion thereof)

### TRACT 6452

- **P-38**: 24-inch water main in Baron Avenue from Perrin Avenue, along project frontage
- **P-39**[1] (portion): 24-inch water main in Street A from Marion Avenue to eastern edge of Project (to T-9 site
- **P-39**[1] (portion): 24-inch in Marion Avenue from Perrin Avenue to Street A
- Tank **T-6** (portion thereof)

## RECOMMENDED INFRASTRUCTURE

Based on qualitative evaluation of the existing and conditioned infrastructure, the following infrastructure would be recommended for the Project to proceed, assuming the existing and conditioned infrastructure is all operational.

[1] This master planned water main has been realigned from that shown in the WMP and replaces the originally aligned main.

### EASTERN PORTION OF DRC 2023-045 – PRESSURE ZONE 2:

- **P-16 (portion), P-17 and P-18 (portion)**: construction of the water main along Behymer Avenue (approximately 1.25 miles) provides two points of connection to the water system (redundancy) and allows the eastern portion of the water system to connect to the main in Behymer in two locations without loss of reliability. (Shown in yellow highlight in **Figure 2**.)
    - A non-master planned water main (425 feet) in Minnewawa Avenue, along the Project frontage, would be recommended to provide the second point of connection in Behymer Avenue without having an interconnection between the pressure zones.
- Tank **T-6**: Recent hydraulic analysis for multiple projects in PZ2 have indicated low pressure results in Harlan Ranch, worsened by the inclusion of projects in the Northwest Village, are resolved by construction of Water Storage Tank T-6 at the SWTP.

### WESTERN PORTION OF DRC 2023-045 – PRESSURE ZONE 1:

- **P-27, P-29, and P-30 (west portion)**: Construction of this series of water mains (approximately 1 mile) connects the western portion of the Project to the PZ1 main in Willow Avenue, providing one point of connection for the Project to the PZ1 water supply. (Shown in yellow highlight in **Figure 2**.)
- A second point of connection to provide water supply reliability and redundancy is possible in multiple ways, both of which still rely on P-29, limiting the true redundancy. (The common portions of the two options that follow are shown in solid orange highlight on **Figure 2**, and the differing portions are shown in dashed orange highlight on **Figure 2**).
    - **P-30 (east portion), P-31, P-32, and P-34**: Construction of this series of water mains (approximately 1.5 miles) connects the western portion of the project to the PZ1 water main in Shepherd Avenue.
    - **P-30 (east portion), P-33, and P-34 (north portion)**: Construction of this series of water mains (approximately 0.75 miles) connects the western portion of the project to the PZ2 water main in Minnewawa Avenue.
        - It would introduce a pressure zone interconnection but is considerably less infrastructure to construct.
    - Interconnection at Peach and Behymer: providing a pressure zone interconnection at this intersection provides redundant water supply to the western portion of the Project without introducing a pressure zone interconnection within a subdivision.

## SUMMARY

The ability to provide reliable water supply to the project is possible through the construction of multiple master planned water mains and a portion of the T-6 tank, as described above. The City has multiple options to provide two points of water supply to the Project, for both the eastern and western components.

It is recommended the water mains in Behymer (P-16, P-17, and P-18) be constructed to provide water supply to both portions of the Project. The mains in Behymer will provide two points of connection to the eastern portion in PZ1 until such a time as the frontage water main is constructed in Minnewawa; there is some level of risk associated with two points of connection being provided by the same transmission main. The second point of connection for the western portion in PZ1 can be achieved through construction of P-27, P-30 (western portion) and P29; therefore, those mains are also recommended for the Project.

Serving this project should not negatively impact the City's ability to provide supply and delivery of water to reasonably foreseeable users within the City assuming adherence to recommendations from prior water resources planning efforts. However, to understand the cumulative impacts to supplies and other major water infrastructure, the City should be tracking changes in demand as part of the development process in order to determine when projects with greater demand are offset by projects with demands lower than originally planned.

# 1.0 INTRODUCTION

This Transportation Impact Analysis (TIA) has been prepared to assess the potential circulation impacts associated with the proposed De Young Properties Peach and Behymer Project (project) within Fresno County (County) and proposed to be annexed in the City of Clovis (City). The approximately 37-acre project site is located at the southwest corner of Minnewawa Avenue and Behymer Avenue on parcels 556-01-028 and 556-01-029. The project site is currently occupied by one residential unit and agricultural uses. Figure 1-1 illustrates the regional and project location. (Figures and tables are provided at the end of each chapter.)

This report has been prepared based on the City of Clovis (City) *Transportation Impact Analysis Guidelines* (TIA Guidelines), dated September 15, 2022.

While level of service (LOS) analysis is no longer a determinant of California Environmental Quality Act (CEQA) impacts, consistency with the City's General Plan goals and policies is still required. Therefore, this TIA includes a Vehicle Miles Traveled (VMT) Analysis for a CEQA Transportation Impact evaluation, and a Local Transportation Analysis (LTA) to satisfy the City's General Plan transportation goals and policies. The scope of work for this TIA, including scope for the CEQA VMT Analysis and LTA with trip generation, trip distribution, study area, and analysis methodologies, has been approved by City staff via the Scoping Agreement process. A copy of the Scoping Agreement is included as Appendix A.

## 1.1 PROJECT DESCRIPTION

The proposed project is located within City's sphere of influence (SOI) and within the northwest urban center growth area. The project is proposing to annex approximately 37 acres from Fresno County into the City and includes the development of 266 single family dwelling units and 32,974 square-feet (sf) of park space. The project is consistent with the City's General Plan. For purposes of this TIA, the entire buildout condition of this project has been considered under all 'plus project' conditions. It is anticipated that the project buildout will occur in year 2028. Figure 1-2 illustrates the conceptual site plan for the project.

As illustrated in Figure 1-2, access to the project will be provided by four driveways:

- Project Driveway 1: This driveway will be located along Peach Avenue and will be a full-access driveway.
- Project Driveway 2: This driveway will be located along Behymer Avenue and will be a right in-right-out (RIRO) only driveway.
- Project Driveway 3: This driveway will be located along Behymer Avenue and will be a right in-right-out-left-in driveway. Left-out access will be restricted.
- Project Driveway 4: This driveway will be located along Behymer Avenue and will be a RIRO only driveway.

It should be noted that the project is also anticipated to have connections to adjacent future residential development located immediately south of the project site.

## 1.2 CEQA VEHICLE MILES TRAVELED ANALYSIS

As per the City's TIA Guidelines, the project cannot be considered small because it exceeds 53 dwelling units (City's threshold for screening out single-family home projects from a VMT analysis). Therefore, a detailed VMT analysis has been conducted for the project. For purposes of this analysis, the project-generated VMT per capita has been calculated using the Fresno Council of Governments (Fresno COG) Activity Based Model (ABM). As per the City's TIA Guidelines, a significant project-generated VMT impact would occur if the project's VMT per capita exceeds a level of 13 percent below the existing County average VMT per capita provided in the guidelines. The detailed VMT analysis, including the screening criteria evaluation, VMT analysis methodology, results, and appropriate mitigation measures for the proposed project are discussed in Chapter 2.0.

## 1.3 LOCAL TRANSPORTATION ANALYSIS STUDY AREA

The LTA for the project examines traffic operations in the vicinity of the proposed project under the following five scenarios:

- Existing Conditions;
- Existing Plus Project Conditions;
- Near-Term Plus Project Conditions;
- Cumulative Without Project Conditions; and
- Cumulative Plus Project Conditions.

Traffic conditions at study intersections were examined for weekday a.m. and p.m. peak-hour conditions. The a.m. peak hour is defined as the 1 hour of highest traffic volumes occurring between 7:00 a.m. and 9:00 a.m. The p.m. peak hour is the 1 hour of highest traffic volumes occurring between 4:00 p.m. and 6:00 p.m. Additionally, since the project is estimated to be completed in 2028, the Near-Term condition was evaluated for the year 2028.

As per the City's TIA Guidelines, the extent of the study area should include the following:

- Pedestrian, bicycle, and transit facilities within 0.5 mile from the project site boundary
- All intersections of major streets that would provide direct access to the project
- All signalized intersections within 0.5 mile of the project site boundary where the project would add 50 or more peak-hour trips, and signalized intersections beyond 0.5 mile where the project would add 100 or more peak-hour trips
- All unsignalized intersections within a 0.5 mile of the project site boundary where the project would add more than 50 peak-hour trips

Based on the aforementioned criteria and as per discussion with the City and adjacent jurisdictions during the scoping agreement process, the following intersections have been included in the LTA.

### 1.3.1 Study Intersections

Per the Scoping Agreement (Appendix A), intersections analyzed in the LTA and their jurisdictions are as follows:

1. Willow Avenue/Behymer Avenue (City of Clovis/City of Fresno);
2. Willow Avenue/Perrin Avenue (City of Clovis/City of Fresno);
3. Peach Avenue/Behymer Avenue (City of Clovis);
4. Minnewawa Avenue/Behymer Avenue (City of Clovis);
5. Minnewawa Avenue/Perrin Road (City of Clovis);
6. Minnewawa Avenue/Shepherd Avenue (City of Clovis);
7. Peach Avenue/Project Driveway 1 (City of Clovis);
8. Project Driveway 2/Behymer Avenue (City of Clovis);
9. Project Driveway 3/Behymer Avenue (City of Clovis); and
10. Project Driveway 4/Behymer Avenue (City of Clovis).

Figure 1-3 illustrates the study area intersections.

# 2.0 VEHICLE MILES TRAVELED ANALYSIS

On December 28, 2018, the California Office of Administrative Law cleared the revised CEQA Guidelines for use. Among the changes to the CEQA Guidelines was the removal of vehicle delay and LOS from consideration under CEQA. With the adopted CEQA Guidelines, transportation impacts are to be evaluated based on a project's effect on VMT.

The City's TIA Guidelines includes screening criteria, VMT analysis methodology, VMT impact thresholds, and VMT mitigation measures. Therefore, the City's TIA Guidelines were used in the evaluation of the project's VMT analysis.

## 2.1 METHODOLOGY

The TIA Guidelines provide multiple project types and thresholds for land use projects. The project was compared with the screening criteria established in the "Project Screening" section of the TIA Guidelines to check if the project can be screened out. The following is a brief description of the project in relation with the project screening criteria:

- **Small Project:** The TIA Guidelines states that projects generating less than 500 daily trips could be screened out of a detailed VMT analysis. As discussed in Section 6.1, Project Trip Generation, the project is estimated to generate 2,508 daily trips. Therefore, the project does not satisfy this screening criteria.

- **Provision of Affordable Housing:** The project proposes to develop market-rate, single-family dwelling units. Therefore, this screening criteria does not apply to the project.

- **Local-Serving Retail:** The project consists of residential land use only; therefore, this screening criteria does not apply to the project.

- **Project Located in a High-Quality Transit Area (HQTA):** The project is not located within an HQTA; therefore, this screening criteria does not apply to the project.

- **Project Located in Low VMT Area:** The project is not located in a low VMT area; therefore, this criterion does not apply to the project.

As shown above, the project could not be screened out from a detailed VMT analysis. As such, pursuant to the TIA Guidelines, a detailed VMT analysis was conducted to assess the project's VMT impact.

### 2.1.1 Thresholds of Significance

The project consists of residential land use. The TIA Guidelines established VMT per capita as the appropriate metric to evaluate residential land use projects while defining Fresno County as the "region" for determining VMT thresholds. The project would have a significant VMT impact if the project VMT per capita is greater than 87 percent of the baseline Fresno County VMT per capita. Based on the TIA Guidelines, baseline Fresno County VMT per capita is 16.1 and the corresponding

threshold is 14.1 (which is 87 percent of 16.1). Therefore, the project will have a significant VMT impact if the project VMT per capita is greater than 14.1.

As recommended in the TIA Guidelines, the Fresno COG ABM was used for the project VMT analysis. The model inputs were updated with the project land uses to calculate project VMT. The project VMT was calculated from a Fresno COG ABM model run as described in the following sections.

### 2.1.2 Project Traffic Analysis Zone Update

The first step in preparation of this analysis was to update the traffic analysis zones (TAZs) in the model that include the project area. The Fresno COG ABM includes the ability to add or split zones. In order to isolate the project VMT, a new zone was created in the model. The project households were included in the newly created zone for modeling purposes. No project-specific network modifications were required for the model run. A model run was conducted for the existing/base scenario with updated model inputs. The outputs from this updated model run were used to calculate the project VMT per capita.

### 2.1.3 Model Runs and Project Vehicle Miles Traveled Estimation

A model run was conducted for this updated model upon completion of the socioeconomic data update. The outputs from this updated model run were used to calculate the project VMT per capita.

## 2.2 PROJECT VEHICLE MILES TRAVELED ANALYSIS

Table 2.A summarizes the regional threshold and project VMT per capita. As shown in Table 2.A, the project VMT per capita is 14.9 which is 5.5 percent higher than the City's VMT per capita threshold. Therefore, based on the TIA Guidelines, the project will have a significant VMT impact.

Detailed VMT calculation for the project is included in Appendix B.

## 2.3 VMT MITIGATION MEASURES

When a lead agency identifies a significant CEQA impact, the agency must identify feasible mitigation measures in order to avoid or substantially reduce that impact. VMT impacts can be mitigated through more behavioral changes. Enforcement of mitigation measures will be subject to the mitigation monitoring requirements under CEQA, as well as the regular police powers of the agency. These measures can also be incorporated as a part of plans, policies, regulations, or project designs.

As previously noted, the project is consistent with the City's General Plan. While preparation of the General Plan, an Environmental Impact Report was prepared, along with a statement of Overriding consideration, that discussed the potential environmental impacts and required mitigation measures to be implemented/followed by all future projects that are consistent with the General Plan. The project will be conditioned to implement and follow these measures. Therefore, though project will have a significant and unavoidable transportation impact under CEQA, no further mitigation measure would be required for the project.

[1] The Fresno County VMT per capita was obtained from the *Transportation Impact Guidelines, City of Clovis* (September 15, 2022).

VMT = vehicle miles traveled

# 3.0 LOCAL TRANSPORTATION ANALYSIS METHODOLOGY

## 3.1 LEVEL OF SERVICE DEFINITIONS

LOS can be characterized for the whole intersection, each intersection approach, and by each lane group. Control delay alone is used to characterize LOS for the entire intersection. Control delay quantifies the increase in travel time due to the traffic signal control and is a surrogate measure of driver discomfort and fuel consumption.

A complete description of the meaning of LOS can be found in Transportation Research Board Special Report 209, *Highway Capacity Manual* (HCM). The HCM establishes LOS A through F for intersections. A description of LOS for signalized and unsignalized intersections is summarized in Table 3.A.

Table 3.B shows the LOS criteria for unsignalized and signalized intersections. For all study area intersections, the *Highway Capacity Manual 7th Edition* (HCM 7) analysis methodologies were used to determine intersection LOS. Intersection LOS was calculated using the Synchro 12 software, which uses the HCM 7 methodologies.

## 3.2 LEVEL OF SERVICE PROCEDURES AND STANDARDS

Study intersections analyzed in this report are completely under the jurisdiction of the City of Clovis or lie at the borders of Clovis and Fresno. The City of Clovis considers LOS D as the LOS standard for study intersections under near-term conditions, unless a finding of overriding consideration was adopted in the City's General Plan EIR. The same criterion holds for cumulative conditions. The City's TIA Guidelines do not define an LOS standard under Existing Plus Project conditions. For the purpose of this analysis, an LOS standard of D has been considered for intersections under Existing Plus Project conditions. The City considers the following operational deficiency criteria for study intersections:

- **Signalized Intersections**
  - If the project triggers a signalized intersection operating at an acceptable LOS to operate at an unacceptable LOS; OR
  - If the project increases the average delay for a signalized intersection that is already operating at an unacceptable LOS.
- **Unsignalized Intersections**
  - If the project triggers an unsignalized intersection operating at acceptable LOS to operate at unacceptable LOS (from E or better to F) and meet the signal warrants criteria; OR
  - If the project increases the applicable delay for an unsignalized study intersection that is already operating at unacceptable LOS and meets the signal warrant criteria.

Per the City of Fresno *Traffic Impact Study Report Guidelines,* updated February 2009, LOS D is considered the LOS standard for study intersections under near-term conditions. The same criterion

holds for long-term conditions. The City's TIA Guidelines do not define an LOS standard under Existing Plus Project conditions.

It should be noted that all City of Fresno study intersections are located within the City of Fresno Traffic Impact Zone (TIZ) III. Per the City of Fresno's General Plan, all intersections within TIZ III should maintain a peak-hour LOS standard of D or better. Therefore, an LOS standard of D has been considered for intersections shared with Fresno for all analysis conditions. The City of Fresno considers the following operational deficiency criteria for study intersections:

- An operational deficiency is created if the addition of the project traffic results in any one of the following:
    - Causes the intersection LOS to change from acceptable to unacceptable levels; OR
    - Causes the intersection LOS to change from an unacceptable LOS (LOS E) to LOS F; OR
    - Increases the average delay at a study intersection that is already operating at an unacceptable LOS.

## 3.3 LIST OF CHAPTER 3.0 TABLES

- Table 3.A: Intersection Level of Service Definitions
- Table 3.B: Level of Service Criteria for Unsignalized and Signalized Intersections

## Table 3.A: Intersection Level of Service Definitions

| LOS | Description |
|---|---|
| A | Traffic operations with a control delay of 10 seconds per vehicle or less and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If LOS A is the result of favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping. |
| B | Traffic operations with control delay between 10 seconds per vehicle and 20 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A. |
| C | Traffic operations with control delay between 20 and 35 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when progression is favorable or the cycle length is moderate. Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of the insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping. |
| D | Traffic operations with control delay between 35 and 55 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable. |
| E | Traffic operations with control delay between 55 and 80 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent. |
| F | Traffic operations with control delay exceeding 80 seconds per vehicle or a volume-to-capacity ratio greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue. |

Source: Highway Capacity Manual (7th Edition).

## Table 3.B: Level of Service Criteria for Unsignalized and Signalized Intersections

| Level of Service | Unsignalized Intersection Average Delay per Vehicle (sec) | Signalized Intersection Average Delay per Vehicle (sec) |
|---|---|---|
| A | ≤ 10 | ≤ 10 |
| B | > 10 and ≤ 15 | > 10 and ≤ 20 |
| C | > 15 and ≤ 25 | > 20 and ≤ 35 |
| D | > 25 and ≤ 35 | > 35 and ≤ 55 |
| E | > 35 and ≤ 50 | > 55 and ≤ 80 |
| F | > 50 | > 80 |

# 4.0 CIRCULATION NETWORK SETTING

## 4.1 EXISTING CIRCULATION NETWORK

The project study area includes the following major roadways as classified based on the roadway classification provided in the Circulation Element of the City's General Plan. Figure 4-1 summarizes the classifications of major roadways within the study area. Following is a brief description of these roadways:

- **Willow Avenue:** Willow Avenue is designated as an Arterial in the City's General Plan. Between Behymer Avenue and Shepherd Avenue, Willow Avenue is a six-lane, divided Arterial with a raised median. There are bicycle lanes along both directions of this segment. However, there is no provision for on-street parking.

- **Minnewawa Avenue:** Within the study area, Minnewawa Avenue is designated as an Arterial between Behymer Avenue and Shepherd Avenue in the City's General Plan. Minnewawa Avenue is a two-lane, undivided road. There are bicycle lanes along both directions of this segment. However, there is no provision for on-street parking.

- **Behymer Avenue:** Within the study area, Behymer Avenue is designated as an Arterial between Willow Avenue and Minnewawa Avenue in the City's General Plan. Between Willow Avenue and Minnewawa Avenue, Behymer Avenue is a two-lane, undivided road. There are no bicycle facilities along both directions of this segment and no provision for on-street parking.

- **Shepherd Avenue:** Within the study area, Shepherd Avenue is designated as an Arterial between Willow Avenue and Minnewawa Avenue in the City's General Plan. Shepherd Avenue is a three-lane, divided road with a raised median. There are bicycle lanes along both directions of the segment. There is no provision for on-street parking along any of these segments.

- **Perrin Avenue:** Within the study area, Perrin Avenue is designated as a Collector in the City's General Plan and is a two-lane, undivided roadway with no bicycle lanes along both directions of these segments and there is no provision for on-street parking.

Figure 4-2 illustrates the existing plus project study intersection geometrics and traffic control, and Figure 4-3 illustrates the cumulative plus project study intersection geometrics and traffic control.

## 4.2 BICYCLES, PEDESTRIANS, AND TRANSIT

### 4.2.1 Bicycle Network

The vision of the City of Clovis *Active Transportation Plan (ATP)*, September 2023, is a "city with a complete and connected network of trails, walkways, and bikeways that provides convenient and intuitive connections to key destinations and supports travel within and between neighborhoods. The network improves quality of life by encouraging walking and bicycling for transportation and recreation." The ATP identifies different strategies to improve safety and accessibility for active

modes of transportation such as walking and biking. There are four different types of existing bicycle facilities in the City:

- Class I (Trails)
- Class II (Bicycle Lanes)
- Class II (Buffered Bicycle Lanes)
- Class III (Bicycle Routes)

One of the long-term visions of the City includes upgrading existing or recommended Class II Bicycle Lanes and Buffered Bicycle Lanes to Class IV Separated Bicycle Lanes.

Figures 4-4 illustrate the existing and proposed bicycle facilities within the City. At present, Class II bicycle lanes exist along Willow Avenue, Minnewawa Avenue and Shepherd Avenue within the study area. However, as shown in Figure 4-4, Class II bicycle facilities are proposed along Behymer Avenue and Peach Avenue roadways within the study.

### 4.2.2 Pedestrian Network

The City has an extensive pedestrian network, with sidewalks along most of the major roads. However, since a portion of the study area falls within recently incorporated areas of the City, sidewalks are not present because they were previously developed as per unincorporated Fresno County design guidelines. Figure 4-5 illustrates the existing sidewalk facilities within Clovis.

The City's ATP has identified improvements to the pedestrian network based on a citywide sidewalk network gap analysis. Additionally, several potential locations have been identified to install mid-block crossings to improve trail connectivity throughout Clovis. Figure 4-6 illustrates the existing and proposed trails and paseos in Clovis. As shown on Figure 4-6, Clovis Old Town Trail exists on the southbound direction of Willow Avenue within the study area. However, additional trails are being proposed in the study area such as along Shepherd Avenue and Minnewawa Avenue.

### 4.2.3 Transit Network

Fresno Area Express (FAX) Route 03 operates within the study area along Willow Avenue, 7 days a week. The route connects communities in Fresno to the different campuses of Clovis Community College. In addition to fixed route services, Round Up is the Clovis paratransit service for disabled City residents. Round Up transit vehicles are all accessible in accordance with the Americans with Disabilities Act (ADA) standards. Figure 4-7 illustrates the existing transit system within Clovis.

# 5.0 TRAFFIC VOLUMES FOR WITHOUT PROJECT SCENARIOS

## 5.1 EXISTING TRAFFIC VOLUMES

Traffic volumes for existing conditions were developed using existing count data collected by Counts Unlimited in May 2024 at study intersections, when schools were in session. Vehicle classification counts were collected at selected study area intersections. Truck percentages for every approach at these intersections were obtained from the vehicle classification counts. As for the remaining study intersections without classification counts, truck percentages for the various approaches were applied based on the truck percentages at the adjacent intersections. This truck percentages were applied in Synchro for intersection LOS analysis.

Figure 5-1 illustrates peak-hour traffic volumes at study intersections under existing conditions. Detailed count sheets are included in Appendix C.

## 5.2 NEAR-TERM (2028) WITHOUT PROJECT TRAFFIC VOLUMES

Traffic volumes under the Near-term (2028) and Cumulative (2046) were developed using the Fresno Council of Governments' (COG's) Activity-Based Model (ABM) growth projections. The current base year for Fresno COG ABM is 2019, while the forecast year is 2046.

The forecast year model socioeconomic data were evaluated to check whether it includes information regarding the approved and pending projects in the region. Information concerning approved and pending projects within the vicinity of the study area were obtained from the City of Clovis, City of Fresno, and County of Fresno, and were compared with the future year socioeconomic data for their respective TAZ. In case it was determined that the respective project was not included, the project information was manually added into the model for generating future year traffic volumes. As such, the updated model included all potential approved and pending projects as provided by the City of Clovis and adjacent jurisdictions to be built by future year conditions. Figure 5-2 illustrates these approved and pending project locations. Table 5.A summarizes the proposed land uses and quantities for these projects.

Growth from the model base to the model future was applied to existing traffic volumes to develop Near-Term (2028) without project traffic volumes. The methodology used to develop cumulative traffic volumes at all study intersections is consistent with the National Cooperative Highway Research Program (NCHRP) and Fresno COG's procedures for post-processing of modeled traffic volumes. As such, Near-Term (2028) without project traffic volumes were developed by interpolating between Existing (2024) and Cumulative (2046) traffic volumes. Figure 5-3 illustrates the peak-hour traffic volumes at study intersections under near-term without project conditions.

It should be noted that volume development for this scenario have been conducted as an intermediate step for the development of traffic volumes for the Near-Term Plus Project Conditions. As such, as recommended in the City's TIA Guidelines and approved during the scoping agreement process, this scenario has not been analyzed in the LTA.

## 5.3 CUMULATIVE (2046) WITHOUT PROJECT TRAFFIC VOLUMES

As previously mentioned, traffic volumes for cumulative conditions were developed using the Fresno COG ABM. The methodology used to develop cumulative traffic volumes at all study intersections is consistent with the National Cooperative Highway Research Program (NCHRP) and Fresno COG's procedures for post-processing of modeled traffic volumes. Figure 5-4 illustrates the peak-hour traffic volumes at study intersections under cumulative without project conditions.

Detailed volume development worksheets are included in Appendix D.

# 6.0 PROJECT TRAFFIC

## 6.1 PROJECT TRIP GENERATION

The trip generation for the proposed project was developed using rates from the ITE *Trip Generation Manual* (11th Edition) for Land Use 210 – "Single-Family Detached Housing – Setting/Location General Urban/Suburban." Table 6.A summarizes the project trip generation. As shown in Table 6.A, the project is anticipated to generate 186 trips in the a.m. peak hour, 250 trips in the p.m. peak hour, and 2,508 daily trips.

## 6.2 PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

The project trip distribution was developed using select zone model runs obtained from the Fresno COG ABM. Appendix A includes the select zone model plots for the proposed project. This was further refined to reflect existing and future circulation network in the vicinity of the proposed project.

Currently, within the project vicinity, Peach Avenue, north of Shepherd Avenue, and Perrin Avenue east of Willow Avenue, are yet to be constructed. As such, it is estimated that this segment of Peach Avenue (between southern end of the project and Shepherd Avenue) along with Perrin Avenue east of Willow Avenue (between Willow Avenue and Peach Avenue) would be constructed along with other major developments within the area as part of the Heritage Grove Specific Plan Project envelop. However, since there is no determined timeline for these circulation improvements, two separate project trip distribution patterns were developed for the project, one for existing and near-term scenario, which reflects the existing circulation network in the project vicinity, and another for cumulative long-term scenario, which accounts for completion of Peach Avenue, Clovis Avenue and Perrin Avenue, among other circulation network improvements.

Additionally, as previously mentioned, upon completion of the adjacent residential projects south of the project limit, project trips may utilize the expanded circulation network to travel south and access Peach Avenue, Perrin Avenue or Minnewawa Avenue. However, as a conservative estimate since these developments are yet to be developed and the circulation network is not finalized, it was estimated that all project trips will be utilizing the four project driveways. This would provide a more conservative estimate in determination of operational efficiencies at the project driveways.

Figure 6-1 illustrates the existing and near-term project trip distribution. Figure 6-2 illustrates the cumulative scenario project trip distribution. The project trip assignment at the study area intersections is the product of the project trip generation and the corresponding trip distribution percentages. Figure 6-3 illustrates the existing and near-term conditions project trip assignment at the study area intersections. Figure 6-4 illustrates the cumulative conditions project trip assignment at the study area intersections.

# 7.0 TRAFFIC VOLUMES FOR PLUS PROJECT SCENARIOS

Existing, near-term, and cumulative plus project traffic volumes were developed by adding project traffic to the traffic for the corresponding without project scenarios. Figures 7-1, 7-2 and 7-3 illustrate "plus project" peak-hour traffic volumes at study intersections under existing, near-term, and cumulative conditions, respectively.

Detailed volume development worksheets are included in Appendix D.

# 8.0 INTERSECTION LEVELS OF SERVICE

## 8.1 EXISTING LEVELS OF SERVICE

An intersection LOS analysis was conducted for existing conditions using the methodologies previously discussed. Existing signal timing sheets were obtained from the City for all signalized analysis intersections. The signal timing sheets are included in Appendix C. It should be noted that the existing signal timings were utilized to analyze traffic operations under near-term and cumulative (2046) scenarios as a conservative approach. Table 8.A summarizes the results of this analysis and shows that the following intersection operates at an unsatisfactory LOS under existing conditions:

- Minnewawa Avenue/Behymer Avenue (a.m. and p.m. peak hours)

All other study intersections operate at a satisfactory LOS under existing conditions.

## 8.2 EXISTING PLUS PROJECT LEVELS OF SERVICE

Previously referenced Figure 4-2 illustrates existing plus project study area intersection geometrics and traffic control. Analysis of the existing plus project scenario is provided to identify direct project-related operational deficiency if the project were to be built and in operation today. This scenario eliminates the effects of ambient growth and other approved/pending projects and deals specifically with operational deficiencies only due to the project traffic.

An intersection LOS analysis was conducted for existing plus project conditions using the methodologies previously discussed. Table 8.A summarizes the results of this analysis and shows that the following intersection is forecasted to operate at an unsatisfactory LOS under existing plus project conditions:

- Minnewawa Avenue/Behymer Avenue (a.m. and p.m. peak hours)

All other study intersections are forecasted to operate at a satisfactory LOS under existing plus project conditions.

It should be noted that this intersection is currently operating at a deficient LOS under existing conditions. As such, the project will be adding to the existing deficiencies at this intersection.

## 8.3 NEAR-TERM (2028) PLUS PROJECT LEVELS OF SERVICE

An intersection LOS analysis was conducted for near-term plus project conditions using the methodologies previously discussed. Table 8.B summarizes the results of this analysis and shows that the following intersections are forecasted to operate at an unsatisfactory LOS under near-term plus project conditions:

- Peach Avenue/Behymer Avenue (p.m. peak hour only)
- Minnewawa Avenue/Behymer Avenue (a.m. and p.m. peak hours)

- Minnewawa Avenue/Perrin Avenue (a.m. and p.m. peak hours)

Based on the operational deficiency criteria stated in Section 3.2 of this TIA, the project is forecasted to create an operational deficiency at these intersections. All other study intersections are forecasted to operate at a satisfactory LOS under near-term plus project conditions.

## 8.4 CUMULATIVE (2046) WITHOUT PROJECT LEVELS OF SERVICE

An intersection LOS analysis was conducted for cumulative without project conditions using the methodologies previously discussed. Table 8.C summarizes the results of this analysis and shows that the following intersections are forecasted to operate at an unsatisfactory LOS under cumulative without project conditions:

- Willow Avenue/Behymer Avenue (a.m. and p.m. peak hours)
- Willow Avenue/Perrin Avenue (p.m. peak hour only)
- Peach Avenue/Behymer Avenue (a.m. and p.m. peak hours)
- Minnewawa Avenue/ Behymer Avenue (a.m. peak hour only)
- Minnewawa Avenue/Perrin Avenue (a.m. and p.m. peak hours)
- Minnewawa Avenue/Shepherd Avenue (a.m. and p.m. peak hours)

All other study intersections are forecasted to operate at a satisfactory LOS under cumulative (2046) without project conditions.

## 8.5 CUMULATIVE (2046) PLUS PROJECT LEVELS OF SERVICE

An intersection LOS analysis was conducted for cumulative plus project conditions using the methodologies previously discussed. Table 8.C summarizes the results of this analysis and shows that the following intersections are forecasted to operate at an unsatisfactory LOS under cumulative plus project conditions:

- Willow Avenue/Behymer Avenue (a.m. and p.m. peak hours)
- Willow Avenue/Perrin Avenue (p.m. peak hour only)
- Peach Avenue/Behymer Avenue (a.m. and p.m. peak hours)
- Minnewawa Avenue/ Behymer Avenue (a.m. peak hour only)
- Minnewawa Avenue/Perrin Avenue (a.m. and p.m. peak hours)
- Minnewawa Avenue/Shepherd Avenue (a.m. and p.m. peak hours)

Based on the operational deficiency criteria stated in Section 3.2 of this TIA, the project is forecasted to create an operational deficiency at these intersections. All other study intersections are forecasted to operate at a satisfactory LOS under cumulative plus project conditions.

It should be noted that all these 6 intersections are forecast to operate at a deficient LOS under cumulative (2046) without project conditions. As such, the project will be adding to the forecasted deficiencies at these intersections.

Detailed intersection LOS worksheets are included in Appendix E.

# 9.0 SIGNAL WARRANT ANALYSIS

As recommended during the scoping agreement process, a signal warrant analysis was conducted at study intersections where installing a signal could be an appropriate and potential operational improvement measure. A Peak Hour Warrant (Warrant 3) was conducted for such locations. Peak hour approach volumes for the study intersections were examined to determine whether signalization is warranted per the criteria defined in the latest version California supplement of the *Manual on Uniform Traffic Control Devices* (CA-MUTCD). Following is a brief summary of signal warrant analysis:

## 9.1 PEACH AVENUE/BEHYMER AVENUE

Figures 9-1 and Figure 9-2 illustrate the Warrant 3 (Peak Hour) for this intersection under near-term and cumulative year conditions, respectively. As shown in these figures, this intersection does not meet the signal warrant under near-term conditions. However, it does meet the signal warrant under cumulative conditions. As such, a signal is warranted at this location.

## 9.2 MINNEWAWA AVENUE/BEHYMER AVENUE

Figures 9-3, Figure 9-4, and Figure 9-5 illustrate the Warrant 3 (Peak Hour) for this intersection under existing, near-term and cumulative conditions, respectively. As shown in these figures, this intersection does meet the signal warrant under existing, near-term and cumulative conditions. As such, a signal is warranted at this location.

## 9.3 MINNEWAWA AVENUE/PERRIN AVENUE

Figures 9-6 and Figure 9-7 illustrate the Warrant 3 (Peak Hour) for this intersection under near-term and cumulative year conditions, respectively. As shown in these figures, this intersection does meet the signal warrant under near-term and cumulative year conditions. As such, a signal is warranted at this location.

# 10.0 CIRCULATION IMPROVEMENTS AND FUNDING SOURCES

## 10.1 RECOMMENDED IMPROVEMENTS

Improvements have been recommended at study intersections where an operational deficiency has been identified based on the results of the LOS analysis. Table 10.A summarizes the recommended improvements for study intersections for all analysis scenarios. Tables 10.B, 10.C, and 10.D summarize the post-improvement intersection LOS under existing, near-term, and cumulative conditions, respectively. Detailed LOS worksheets are included in Appendix E. Figures 10-1, 10-2, and 10-3 illustrate the with recommended improvements intersection geometrics and traffic control under existing, near-term, and cumulative conditions, respectively.

It should be noted that peak-hour signal warrant analyses have been conducted for the intersections where a signal has been proposed. As such, a signal was only recommended as an improvement if it meets the peak-hour signal warrant.

## 10.2 FUNDING SOURCES AND MECHANISMS

Where there is a funding mechanism (fee program) for the recommended improvements, payment into the fee program would be considered sufficient project obligation to alleviate project-related operational deficiencies. At study locations where the addition of project traffic creates an operational deficiency (existing plus project conditions) and there is no funding mechanism in place, the project will be responsible for the implementation of the improvement. At locations where the project adds to or creates a forecast deficiency and there is no funding mechanism in place, the project is responsible for its fair-share payment.

### 10.2.1 City of Clovis Development Impact Fee Program and Operations

Several recommended improvements are part of City of Clovis operations or Clovis Development Impact Fee (DIF) Program. As such, improvements that proposes optimizing the signal timings or modifications of existing signal operations only would be implemented by City of Clovis operations. Additionally, improvements that are included in the City's DIF program, the project will be paying into this fee program for these improvements. The City currently have three mechanisms within its DIF program which will be responsible for these improvements. Following is a summary of these three mechanisms within the City's DIF program:

- **Traffic Signal Fee:** The Traffic Signal fee pays for the construction and financing of those certain planned traffic signals at the intersection of Major Streets and the interconnecting fiber optic system.
- **Outside Travel Lane Fee:** The Outside Travel Lane fee pays for the construction and financing of those certain planned travel lanes of a Major Street that are located between the frontage improvements and the Center Travel Lanes.
- **Center Travel Lane Fee:** The Center Travel Lane fee pays for the construction and financing of those certain planned travel lanes of a Major Street that are located within the median area. The fee also includes the adjacent travel lane on roads with 4 lanes or less, or the 2 adjacent lanes on 6-lane roads.

### 10.2.2 Fresno County Regional Transportation Mitigation Fee Program

The Fresno County Regional Transportation Mitigation Fee (RTMF) was created to fulfill one of the terms of the Measure 'C' Extension ballot measure, which was approved by Fresno County voters in 2006. The RTMF became effective on January 1, 2010. The RTMF is "intended to ensure that future development contributes to its fair share towards the cost of infrastructure to mitigate the cumulative, indirect regional transportation impacts of new growth in a manner consistent with the provisions of the State of California Mitigation Fee Act". The fees help fund improvements needed to maintain the target level of service in the face of higher traffic volumes brought on by new developments. As such, any new development within Fresno County, including developments within the City are required to pay the RTMF fee based on the adopted fee structure. The project will also be paying the RTMF fee which will help fund improvements and maintenance of the regional roadway network, specifically improvements under Caltrans jurisdiction. However, within the study area none of the intersections are under Caltrans jurisdiction.

### 10.2.3 Project Fair Share

In the absence of a fee program where the project has an impact on the roadway network, the project will pay its respective fair share for the proposed improvements. The project's fair share has been calculated based on project traffic as a percentage of total growth of existing traffic plus project volumes. However, none of the improvements require a fair share payment. Table 10.E summarizes the recommended improvement for the deficient intersections and the corresponding funding mechanism (Clovis Operations and Development Impact Fee).

# 11.0 INTERSECTION QUEUING ANALYSIS

Tables 11.A, 11.B, and 11.C list the available turn-pocket storage lengths and summarize the 95th percentile back-of-queue lengths at the study intersections under existing, near-term (2028), and cumulative (2046) conditions. The queues for the signalized intersections have been reported from Synchro, while unsignalized intersections, the SimTraffic queues have been reported since Synchro does not appropriately report queues at unsignalized intersections.

Tables 11.D, 11.E, and 11.F lists the 95th percentile back-of-queue lengths at the study intersections for plus project and plus project with improvements conditions, under existing, near-term (2028), and cumulative (2046) scenarios. It also includes the recommended turn-pocket storage lengths at these intersections. The recommended turn pocket storage lengths have been calculated based on recommended lane geometry with improvements and availability of adequate right-of-way.

Detailed queuing worksheets are included in Appendix F.

# 12.0 SITE DISTANCE ANALYSIS AND SAFE ROUTES TO SCHOOL ANALYSIS

As discussed previously and shown on Figure 1-2, access to the project will be provided by four driveways: one full-access driveway on future Peach Avenue and two RIRO access and one right-in-right-out-left-in driveway along Behymer Avenue.

## 12.1 SIGHT DISTANCE ANALYSIS

A sight distance analysis was conducted at the project driveways along Behymer Avenue and future roadway on Peach Avenue. Sight distance is the length of the visible roadway a driver can see approaching vehicles before their line of sight is blocked by any object. For purposes of this analysis, only the stopping sight distance and corner sight distance have been evaluated. That is because those are the only two sight distance issues that would affect safe maneuver of ingress/egress traffic from the project driveway.

According to the Caltrans *Highway Design Manual* (HDM) (dated July 2020), the stopping sight distance is the minimum sight distance along a roadway required to allow a driver to decrease their speed from the design speed to a complete stop. The corner sight distance is the minimum sight distance in which a driver at a stop-controlled approach can see oncoming traffic on the major street to safely maneuver onto the roadway.

The stopping sight distance was evaluated on the roadways along the project frontage (i.e., Peach Avenue and Behymer Avenue). For purposes of this analysis, the posted speed limit of 30 mph has been considered as the design speed for Peach Avenue and the posted speed limit is 40 mph on Behymer Avenue. As stated in Table 201.1 of the HDM, the minimum stopping sight distance is 200 feet for a design speed of 30 mph and 300 feet for a design speed of 40 mph. Therefore, the minimum stopping sight distance has been considered as 200 feet for Project Driveway 1 (along Peach Avenue) and 300 feet for Project Driveway 2, Project Driveway 3, and Project Driveway 4 (along Behymer Avenue).

As for corner sight distance, Section 405.1 of the HDM states that corner sight distance requirements are not applicable for urban driveways unless signalized. However, as a conservative approach, corner sight distance were also evaluated for the project driveway. The minimum corner sight distance was based on design speed, time gap, and type of vehicles from the minor roads (project driveways) to enter the major roads (Peach Avenue and Behymer Avenue). Based on the requirements established in the HDM, it was determined that a minimum corner sight distance of 335 feet would be required for left-turn maneuvers coming out of Project Driveway 1. Furthermore, a minimum corner sight distance of 290 feet would be required for right-turn maneuvers coming out of Project Driveway 1 and 385 feet would be required for right-turn maneuvers coming out of Project Driveway 2, Project Driveway 3, and Project Driveway 4.

Since the corner sight distance required at the project driveway would be greater than the stopping sight distance, sight triangle figures were created using the corner sight distance. As a conservative measure, left-turn corner sight distance was used for both right- and left-turn sight triangles for the project driveway 1. As illustrated in Figure 12-1, Project Driveway 1 will provide adequate sight

distance for left- and right-turn maneuvers onto Peach Avenue. Similarly, as illustrated in Figure 12-2, Figure 12-3 and Figure 12-4, the Project Driveways will provide adequate sight distance for right-turn maneuvers onto Behymer Avenue.

## 12.2 SAFE ROUTES TO SCHOOL

The project will be under the jurisdiction of the Clovis Unified School District (CUSD). The CUSD provides transportation for students who live in excess of an established radius zone. The zones are a radius of 1.00 mile for grades Kindergarten through 6$^{th}$ and 2.50 miles for grades 7$^{th}$ through 12$^{th}$.

The nearest elementary school is Riverview Elementary School, which is located at the southeast corner of the intersection of Chestnut Avenue/Behymer Avenue. The distance between the project corner and the school along Chestnut Avenue/Behymer Avenue is approximately 0.9 mile. Therefore, it is estimated that children from the project will be accessing the elementary school by car, bike, or by walking. This school can be accessed from the project site by traveling west along Behymer Avenue to the intersection of Willow Avenue/Behymer Avenue and continuing west along Beymer Avenue to the intersection of Chestnut Avenue/Behymer Avenue.

It should be noted that the project is within the vicinity of the proposed Heritage Grove Specific Plan project. Based on the project description of the Specific Plan, an elementary school is being proposed within Planning Area 9 of the Specific Plan. Though the completion date for this elementary school is still undetermined, elementary school students from the project are anticipated to attend this school once completed. This new school will be within close proximity of the project site. The Heritage Grove Specific Plan project will also be constructing sidewalks and bike lanes as part of internal circulation network to provide safe route for walking and biking to school. As such, no further safety improvements may be required for the elementary school students upon construction of this elementary school.

Currently, sidewalks are present along both sides of Behymer Avenue between Chestnut and Willow Avenue. The project will be adding sidewalks along Behymer Avenue along the project frontage. The intersections of Willow Avenue/Behymer Avenue and Chestnut Avenue/Behymer Avenue are signalized intersections with marked crosswalks for pedestrians. As such, with these proposed improvements, people could safely walk using the sidewalks described above and also could safely cross these intersections when permitted without any conflicting vehicular movements. The intersection of Peach Avenue/Behymer Avenue is currently stop controlled along the minor lanes. However, a signal has been recommended at this intersection. Therefore, a signal will be installed at this intersection with marked crosswalks and other safety improvements. As such, a safe walking route to the elementary school would be present for elementary school students from the project.

The nearest middle school from the project is Granite Ridge Intermediate School and nearest high school is the Clovis North High School, both of which are located at the northwest corner of the intersection of Willow Avenue/International Avenue. The distance between the schools and the project is approximately 1 mile and additionally, the project is included within the school's walking radius area. The most direct connection to these schools from the project is using the same routes toward Riverview Elementary School and continue northbound on Willow Avenue. Clovis Old Town Trail is present on the southbound direction of Willow Avenue between Behymer Avenue and

International Avenue. Additionally, the intersection of Willow Avenue/International Avenue is a signalized intersection with a marked crosswalk. As such, a safe walking route would exist between the project and the schools and no further safety improvements will be required.

# 13.0 SUMMARY AND CONCLUSIONS

The proposed project will consist of 266 single-family homes on approximately 37 acres of the site. The remaining 32,974 sf of the site will be used for park space. It is anticipated that the project buildout will occur in year 2028. Access to the project will be provided by four driveways.

## 13.1 VEHICLE MILES TRAVELED ANALYSIS SUMMARY

The project's VMT per capita is 14.9 which is 5.5 percent higher than the City's VMT per capita threshold. Therefore, based on the TIA Guidelines, the project will have a significant VMT impact. However, given the project is consistent with the City's General Plan, it would fall under the Statement of Overriding Considerations for the City's General Plan EIR and would implement the mitigation measures recommended in the EIR. As such, the project would not require any additional mitigation measures than what has been recommended in the General Plan EIR.

## 13.2 EXISTING CONDITIONS SUMMARY

All study intersections operate at a satisfactory LOS under existing without and plus project conditions with the exception of intersection at Minnewawa Avenue/Behymer Avenue.

## 13.3 NEAR-TERM (2028) CONDITIONS SUMMARY

All intersections are forecast to operate at a satisfactory LOS under near-term (2028) plus project conditions with the exception of 3 intersections.

## 13.4 CUMULATIVE (2046) CONDITIONS SUMMARY

All intersections are forecast to operate at a satisfactory LOS under cumulative (2046) without and plus project conditions with the exception of 6 intersections.

## 13.5 IMPROVEMENTS SUMMARY

Based on the improvements discussed in Section 10.1 'Recommended Improvements', of this report, all intersections are estimated to operate satisfactorily. All of the recommended circulation improvements are covered by the Clovis Operations and Development Impact Fee.

## 13.6 QUEUEING ANALYSIS SUMMARY

The recommended storage lengths have been proposed at intersections based on the availability of right-of-way and 95th percentile back-of-queue lengths at the study intersections.

## 13.7 SIGHT DISTANCE ANALYSIS SUMMARY

A sight distance analysis was conducted at the project driveways. Based on the sight distance analysis, the proposed project driveways achieve adequate sight distances and have clear sight triangles for the drivers.

## 13.8 SAFE ROUTES TO SCHOOL ANALYSIS SUMMARY

The project is well connected with the nearby elementary school, intermediate school and the high school for non-motorized modes of commute due to existing and proposed sidewalks as well as signalized intersections with marked crosswalks.

Subject: Scope of Work for De Young Properties Peach and Behymer Project Transportation Impact Analysis (LSA Project No. 20231181)

Dear Sean:

LSA will be preparing a Transportation Impact Analysis (TIA) for the De Young Properties Peach and Behymer Project (project) in Clovis (City). The approximately 37 acres project site is located at the southwest corner of Minnewawa Avenue and Behymer Avenue on parcels 556-01-028 and 556-01-029. The project site is currently occupied by one residential unit and agricultural uses. Figure 1 (all figures, tables, and appendices attached) illustrates the regional and project location.

The proposed project is located within City's sphere of influence (SOI) and within the northwest urban center growth area. The project is proposing to annex approximately 37 acres from Fresno County into the City and includes the development of 266 single family dwelling units and 32,974 square-feet (sf) of park space. Figure 2 illustrates the tentative subdivision map for the residential development in the project. Access to the project site will be provided via four project driveways – one on future extension of Peach Avenue, and three on Behymer Avenue. The following provides a brief description of proposed access controls for all project driveways:

- Project Driveway 1: This driveway will be located along Peach Avenue and will be a full access driveway.
- Project Driveway 2: This driveway will be located along Behymer Avenue and will be a right-in-right-out (RIRO) only driveway.
- Project Driveway 3: This driveway will be located along Behymer Avenue and will be a right-in-right-out-left-in driveway. Left-out access will be restricted.
- Project Driveway 4: This driveway will be located along Behymer Avenue and will be a RIRO only driveway.

It should be noted that the project is also anticipated to have connections to adjacent future residential development located immediately south of the project site.

The City requires preparation of TIAs using the City of Clovis *Transportation Impact Analysis Guidelines* for land uses projects within the City. As recommended in the City's TIA Guidelines, a Local Transportation Analysis (LTA) would be required for City's General Plan consistency

requirement purposes, while a vehicle Miles Traveled Analysis will be required for California Environmental Quality Act (CEQA) Transportation Impact Assessment purposes. As such, LSA anticipates that the following scope of work will be required to prepare the TIA for the proposed project.

## LOCAL TRANSPORTATION ANALYSIS

### Study Area Intersections

An LTA will be prepared to satisfy the requirements established by the City's TIA Guidelines to evaluate the project's effect on General Plan level of service (LOS) requirements. Traffic operations at all study intersections will be analyzed during the weekday a.m. and p.m. peak hours. The a.m. peak hour is defined as the one-hour period of the highest traffic volume occurring between 7:00 and 9:00 a.m. while the p.m. peak hour is defined as the one-hour period of the highest traffic volume occurring between 4:00 and 6:00 p.m. Intersection LOS will be calculated using the *Highway Capacity Manual* 7th Edition (HCM 7) analysis methodologies and by using the Synchro 12 software.

As per the City's TIA guidelines, the extent of the study area should include the following:

- Pedestrian, bicycle, and transit facilities within a half-mile distance from the project site boundary;
- All intersections of major streets that would provide direct access to the project;
- All signalized intersections within one-half mile of the project site boundary where the project would add 50 or more peak hour trips, and signalized intersections beyond one-half mile where the project would add 100 or more peak hour trips; and
- All unsignalized intersections within a half-mile of the project site boundary where the project would add more than 50 peak hour trips.

As such, the TIA will examine the following intersections:

1. Willow Avenue/Behymer Avenue (City of Clovis/City of Fresno);
2. Willow Avenue/Perrin Avenue (City of Clovis/City of Fresno);
3. Peach Avenue/Behymer Avenue (City of Clovis);
4. Minnewawa Avenue/Behymer Avenue (City of Clovis);
5. Minnewawa Avenue/Shepherd Avenue (City of Clovis);
6. Peach Avenue/Perrin Avenue [Future intersection] (City of Clovis);
7. Peach Avenue/Project Driveway 1 (City of Clovis);
8. Project Driveway 2/Behymer Avenue (City of Clovis);
9. Project Driveway 3/Behymer Avenue (City of Clovis); and
10. Project Driveway 4/Behymer Avenue (City of Clovis).

Figure 3 illustrates the study area intersections.

## Project Trip Generation, Trip Distribution, and Trip Assignment

The trip generation for the proposed project was developed using rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition) for Land Uses 210 - "Single-Family Detached Housing – Setting/Location General Urban/Suburban." The project trip generation is summarized in Table A. The project is anticipated to generate 2,508 total daily trips, with 186 trips occurring during the a.m. peak hour and 250 trips occurring during the p.m. peak hour.

The project trip distribution patterns were derived from the select zone model run obtained from the Fresno Council of Governments' (COG's) Activity-Based Model (ABM). The select zone model plot is included in Appendix A. This was further refined to reflect existing and future circulation network in the vicinity of the proposed project.

Currently, within the project vicinity, Peach Avenue, north of Shepherd Avenue, and Perrin Avenue east of Willow Avenue, are yet to be constructed. As such, it is estimated that this segment of Peach Avenue (between southern end of the project and Shepherd Avenue) along with Perrin Avenue east of Willow Avenue (between Willow Avenue and Peach Avenue) would be constructed along with other major developments within the area as part of the Heritage Grove Specific Plan Project envelop. However, since there is no determined timeline for these circulation improvements, two separate project trip distribution patterns were developed for the project, one for existing and near-term scenario, which reflects the existing circulation network in the project vicinity, and another for cumulative long-term scenario, which accounts for completion of Peach Avenue, Clovis Avenue and Perrin Avenue, among other circulation network improvements.

Additionally, as previously mentioned, upon completion of the adjacent residential projects south of the project limit, project trips may utilize the expanded circulation network to travel south and access Peach Avenue, Perrin Avenue or Minnewawa Avenue. However, as a conservative estimate since these developments are yet to be developed and the circulation network is not finalized, it was estimated that all project trips will be utilizing the four project driveways. This would provide a more conservative estimate in determination of operational efficiencies at the project driveways.

Figure 4 illustrates the existing and near-term project trip distribution. Figure 5 illustrates the cumulative scenario project trip distribution. The project trip assignment at the study area intersections is the product of the project trip generation and the corresponding trip distribution percentages. Figure 6 illustrates the existing and near-term conditions project trip assignment at the study area intersections. Figure 7 illustrates the cumulative conditions project trip assignment at the study area intersections.

## Analysis Scenarios

The LTA will be prepared based on consultation with City staff and meet the requirements recommended in the City's TIA Guidelines. As recommended in the City's TIA Guidelines, the LOS analysis will examine traffic operations at the study intersections under the following scenarios:

- Existing Conditions;
- Existing Plus Project Conditions;

- Near-Term Plus Project Conditions;
- Cumulative Long-Range Without Project Conditions; and
- Cumulative Long-Range Plus Project Conditions.

### Volume Development and Analysis Methodology

Traffic volumes for existing conditions will be developed using existing count data collected at study intersections.

Traffic volumes under near-term plus project conditions will be developed by adding traffic volumes from approved and pending development projects located near the study area and project traffic to existing traffic volumes. LSA will contact City staff and adjacent jurisdictions for a list of approved and pending development projects that are estimated to be completed by the project completion year.

Traffic volumes for cumulative year without project conditions will be developed by using forecast volumes obtained from the Fresno COG ABM. The methodology to develop cumulative year without project traffic volumes at study area intersections will be consistent with the COG's procedures for post-processing of modeled traffic volumes.

Existing and cumulative year plus project traffic volumes will be developed by adding project traffic to the traffic volumes for the corresponding without project scenarios.

For all analysis scenarios, intersection LOS will be calculated using the *Highway Capacity Manual* 7th Edition (HCM 7) analysis methodologies and by using the Synchro 12 software.

### Intersection Queuing Analysis

An intersection queuing analysis will be performed at all study intersections. The queuing analysis will be performed using Synchro for signalized intersections and using SimTraffic for unsignalized intersections.

### Analysis of Traffic Operations and Recommended Circulation Improvements

LOS without the project will be compared with LOS under plus project scenarios for all analysis scenarios to determine operational deficiencies based on the LOS standards and operational deficiency criteria as applicable for the City. Furthermore, necessary improvements will be recommended to offset any operational deficiencies. Improvements may include addition of intersection turn lanes, changes in traffic control, signalization, etc. The LOS with the proposed improvements will be calculated and summarized, along with a comparison of the LOS without improvements.

### Signal Warrant Analysis (if Required)

A peak hour signal warrant analysis would be conducted at unsignalized intersections if a signal is recommended as an improvement. Peak hour approach volumes for study intersections will be examined to determine whether signalization may be warranted per the criteria defined in the California supplement of the *Manual on Uniform Traffic Control Devices* (CA-MUTCD).

### Fair-Share Contributions (if Required)

A fair share percentage will be calculated for study intersection improvements recommended in the TIA that are not included in the Measure C program, the City's Development Fee program, or any other funding program. The percentage of fair share for the project will be calculated at each location using the total trips generated by the project divided by the total "new" traffic, which is the net increase in traffic volumes from existing to cumulative year conditions.

### Site Access and Circulation Analysis

A site access and circulation analysis will be conducted as per the criteria stated in the City's TIA guidelines. The following issues will be evaluated as part of this analysis:

- Anticipated queues and minimum required throat depth (MRTD) at all project access locations;
- A sight distance analysis at the project driveways including recommended improvements in cases of unsafe traffic conditions; and
- Safety of potential pedestrian paths of travels from the project site to schools, commercial areas, and nearby bus stops.

### Safe Routes to School Analysis

Since the project is residential in nature, a safe route to school analysis would be included as part of the LTA. This would analyze the pedestrian and bike facilities en route to school from the project and discuss necessary improvements, if required.

## PROJECT VEHICLE MILES TRAVELED ANALYSIS

The TIA will include a Vehicle Miles Traveled (VMT) analysis to meet CEQA requirements. The project VMT analysis will be prepared consistent with the City's TIA Guidelines. As per the City's TIA Guidelines, the project cannot be considered as a small project given that the project exceeds 53 dwelling units. Therefore, a full VMT analysis will be required for the project. For purposes of this analysis, the project-generated VMT per capita will be obtained from the Fresno COG ABM. As per the City's TIA Guidelines, a significant project-generated VMT impact would occur if the project's VMT per capita exceeds a level of 13 percent below the existing County average VMT per capita provided in the guidelines. However, it should be noted that since the project is consistent with the City's General Plan, it may fall under the Statement of Overriding Considerations for the City's General Plan EIR and may not require any additional project specific mitigation measures.

Should you have any questions, please do not hesitate to contact me at (951) 781-9310 or email me at Ambarish.Mukherjee@lsa.net.

Sincerely,

**LSA ASSOCIATES, INC.**

**PREEMPTION NOTE:** Each preemption has it's own set of menus. To access each menu :

a. Press "3" for preemption

b. Then enter "Preempt number" (1 through 6 and shown as "#" in Schedules above)

c. Then enter "number of Menu item" you want to access (*1-Times, 2-Phases, 3-Options, 4-Times+, 5-Overlaps+ or 6-Options+*)

d. Once in an above menu push Escape once to go back to main preempton menu.
